11th Australasian Plant Conservation Conference. November 14, 2016 - November 18, 2016. APCC11 aims to bring plant conservation scientists and practitioners together to discuss how best to approach the key threats to plant conservation in Australia. + Google Calendar + iCal Export. Details Start: November 14, 2016 End: November 18, 2016

11th Australasian Plant Conservation Conference

The 10th Australasian Masonry Conference is being hosted by The University of Newcastle, Think Brick Australia and CMAA and is being held at the PARKROYAL Hotel, Darling Harbour, Sydney, from 11-14 February, 2018.

Australasian Masonry Conference

The 10th International Conference On Biodiversity and Conservation is going to be held at Sydney,Australia during October 12-13 ,2020. Through the theme: " " Effect of covid 19 on earth's biodiversity, environmentand conservation ", conference will explore the advances in Biodiversity. It will be organized by ConferenceSeries LLC Ltd.

Biodiversity and Conservation - Conference Series

La Trobe University and the Australian Network for Plant Conservation (ANPC) are pleased to present the 11th Australasian Plant Conservation Conference (APCC11) to be held from the 14th - 18th November 2016 at the Royal Botanic Gardens Victoria, Melbourne. APCC11 aims to bring plant conservation scientists and practitioners together to discuss how best to approach the key threats to plant ...

11th Australasian Plant Conservation Conference (APCC11 ...

The 10th Australasian Plant Conservation Conference will be held in Hobart, Tasmania 12 - 14 November 2014. ANPC national conferences provide a forum for conservation practitioners, community members and the scientific community to interact at a practical level. Themes

ANPC News

The Centre for Australian National Biodiversity Research (CANBR) at CSIRO, and the Australian Network for Plant Conservation are pleased to present the 12th Australasian Plant Conservation Conference (APCC12).

Discusses the various options for conserving plants at the level of the gene, species and community.

This book includes 20 different chapters, where the authors have addressed various aspects of the cultivation, taxonomy, socio-economic importance and breeding and development as applied to neglected and underutilized crops. The first chapter deals with the more general aspects of the cultivation and propagation of these crops, thirteen chapters co

Crop wild relatives (CWR) are species closely related to crop plants which can contribute beneficial traits such as pest or disease resistance and yield improvement. Through an examination of national, regional and global context of CWR, this text presents methodologies and case studies that provide recommendations for global conservation and use.

This book discusses the biological control of weeds using arthropods, providing ecological management models for use across the tropical world.

Describes a set of principles that will enable landholders to maintain or increase productivity without compromising ecological sustainability, and at the same time maintaining a substantial proportion of the native flora and fauna. The book provides the technical foundations underpinning the principles.

This book will appeal to an international audience as well as be irresistible to local readers. Anyone working or with an interest in Australia ' s arid zone should need ready access to this book. There is no equivalent publication out there at the moment, and this book has many authoritative chapters, richly illustrated with colourful material. The challenge of this book was to assemble current knowledge on particular topics and concepts, and principles relating to them. It is also forward-looking by identifying where there are gaps or inadequacies in knowledge, and where future research needs to be directed. Lead authors were encouraged to take such an approach; they had the opportunity to involve any author they considered appropriate. The final product shouldbe a fabulous resource, also for university courses, especially at MSc level.

Arising from a conference held at the University of Sydney in 1993, this collection of 35 papers addresses topics such as habitat loss, degradation and pollution of water resources, weeds and feral animals, and commercial use of native biota. Also discusses the role of government and non-government agencies in conservation. Includes 25 colour plates, references and an index. The editors work in the Environmental Survey and Research Division of the NSW National Parks and Wildlife Service.

Food Security and Plant Disease Management offers a comprehensive exploration of biocontrol, the latest technologies being used in plant health assurance, and resulting impacts on crop production and food security. Discussing both theoretical and practical topics, the book examines basic and advanced applications of biosensor and nano-technologies, introduces plant disease, including modes of action and their transmission in host plants, then covers factors contributing to plant disease and various means of addressing those diseases. This volume is part of the Microorganisms in Agriculture and the Environment series and provides important information for developing new effective plant protection practices. The direct or indirect applications of beneficial microbes in the treatment of plant disease is termed " microbial control and these methods have increasingly been identified as important options for plant health management. The beneficial microbes as well as recent omic and nano-technologies also reveal important mechanisms that can be utilized in disease management strategies. Explores the impact of climate change on plant diseases and new methods of resolution Includes information on gene expression during crop disease management Presents insights into the legal and commercial aspects of microbial control
