Database management for business intelligence systems. The use of consumer data for market analysis has been used since ancient times when the Mesopotamians sold shipments of olive oil and other commodities to the Ancient Grecian empire. While the foundations of the data storage have changed dramatically from Mesopotamian clay tablets to today's modern database management systems, the goals of business intelligence and data mining remain unchanged.

[Database Management for Business Intelligence](#)

Business intelligence is a very amorphous notion that is not well defined. In this course we refer instead to a "business intelligence" environment which is composed of many different components (including both technology and management dimensions). This slide discusses the use of data warehouses and data marts by firms.

[Oracle Database Online Documentation 12c](#)

A data warehouse system enables an organization to run powerful analytics on huge volumes (petabytes and petabytes) of historical data in ways that a standard database cannot. Data warehousing systems have been a part of business intelligence (BI) solutions for over three decades, but they have evolved recently with the emergence of new data types and data hosting methods.
