When the air conditioner in your 1997 Ford Explorer starts blowing hot air, you likely have a freon leak. Recharging the freon in your AC system is an inexpensive and easy first step to restoring the cooling capacity of your A/C system. Most refrigerants include a leak sealer that will seal small leaks in addition to filling the R134a refrigerant.

The air conditioner relay on a Ford Explorer is located in the relay box near the driver ' s-side fender well. The air conditioner uses high-amperage wiring, which could be dangerous if wired into the cab of the Explorer. Instead, the air conditioner uses a relay--a remote switch. The wiring from the air conditioner control switch inside the vehicle carries less than 20 amps and grounds the relay to activate the air compressor.
