Press Release: 2017 Multiple Sclerosis Research Program ...

As multiple sclerosis develops, the protective layer around a person's nerve fibers is destroyed, preventing signals from getting transmitted between the brain and the rest of the body. That lack of communication leads to a loss of function, such as motor issues and muscle weakness.

Multiple Sclerosis Symptoms Research 2017: Why Do Some MS ...

Multiple sclerosis (MS) is an inflammatory auto-immune disease of the central nervous system (CNS). Serum glucose alterations and impaired glucose tolerance (IGT) are reported in MS patients, and are commonly associated with the development of cardio-metabolic co-morbidities. We previously found that a subgroup [...]

IJMS | Special Issue : Advances in Multiple Sclerosis 2017

The researchers examined health records of 14,000 people with multiple sclerosis from B.C., Saskatchewan, Manitoba and Nova Scotia over a 20-year period and compared them to the health records of...

Medical history reveals multiple sclerosis begins to ...

P. Bannerman, in The Cerebral Cortex in Neurodegenerative and Neuropsychiatric Disorders, 2017. Introduction. Multiple sclerosis (MS) is a chronic neuroinflammatory disease of the brain and spinal cord causing demyelination and multiple forms of neuronal damage and, as such, should be classified as a neurodegenerative disease (Bar-Or, Rieckmann, Traboulsee, & Yong, 2011).

Multiple Sclerosis - an overview | ScienceDirect Topics

The Wellness Research Work Group, a collection of researchers and people with MS with expertise and experience in MS and wellness, has published a new article on gaps and priorities in MS wellness research. The publication sets forth the key questions to promote and encourage wellness research across the MS research community and beyond, focusing on the areas of diet, exercise and emotional ...

Spring 2017 | National Multiple Sclerosis Society

The research was made possible through the generosity of patients at the Brain & Mind Centre's multidisciplinary Multiple Sclerosis Clinic, a collaborative service offered by Royal Prince Alfred ...

Research pinpoints powerful biomarker of multiple sclerosis

Remyelination failure in multiple sclerosis (MS) is associated with a migration/differentiation block of oligodendroglia. The reason for this block is highly debated. It could result from disease-related extrinsic or intrinsic regulators in oligodendroglial biology. To avoid confounding immune-mediated extrinsic effect, we used an immune-deficient mouse model to compare induced pluripotent ...
