Linear

occurs as an exponent.

For real numbers c and d , a function of the form

$f(x) = c + d^x$ is also an

exponential function,

since it can be rewritten

as $f(x) = d^x + c$. As functions

of a real variable,

exponential functions

are uniquely

characterized by the fact

that the growth rate of

such a function (that is,

its derivative) is directly

Read Book 2 3

Linear

For linear growth, the constant additive rate of change over equal increments resulted in adding 2 to the output whenever the input was increased by one. The general form of the exponential function is $y = a \cdot b^x$ where a is any nonzero number, b is a positive real number not equal to 1. If the function grows at a rate proportional to
