Then the distribution of $X + U \pmod 1$ is the same as the distribution of X for all nonnegative random variables U independent of X if and only if X has a distribution uniform on $[0, 1]$. A natural bivariate version of this is the following: Let (X, Y) be a random vector taking values in the unit square.

A Bivariate Uniform Distribution Springerlink | lines-art.com We define the bivariate first order stationary autoregressive process $\{(X_n, Y_n)\}$ with uniform marginal distribution where $\{X_n\}$ and $\{Y_n\}$ are the two stationary sequences with uniform $U(0, 1)$ marginal distributions. We also estimate the unknown parameters of the model.

A Bivariate Uniform Distribution Springerlink
A class of symmetric bivariate uniform distributions is proposed for use in statistical modeling. The distributions may be constructed to be absolutely continuous with correlations as close to ± 1 as desired. Expressions for the correlations, regressions and copulas are found. An extension to three dimensions is proposed.
