However, implementing such systems in the ED may require further time dedicated for training and frequent use and may be impractical.

The ABC of handover: a qualitative study to develop a new ...

Communication breakdown, collaboration failure, and inability to recognize the clinical deterioration of patients are the main reasons for the occurrence of serious events in the hospital setting . De Meester et al. conducted a study to determine the effect of the SBAR tool on the incidence of serious adverse events (SAEs) in hospital wards.

Reported prevalences are low, with lethargy with or without fever as the most commonly diagnosed adverse event (Gaskell et al., 2002; Moore et al., 2007). Some risk factors have been identified (Moore et al., 2007); risk was found to be greater for neutered versus entire cats, female versus male cats of the same neuter status and for cats up to one year of age.
