A frontier market is a term for a type of developing country's market economy which is more developed than a least developed country's, but too small, risky, or illiquid to be generally classified as an emerging market economy. The term is an economic term which was coined by International Finance Corporation's Farida Khambata in 1992. The term is commonly used to describe the equity markets of the smaller and less accessible, but still "investable",

This book examines sub-Saharan Africa as an investment opportunity, and presents readers with its economic appeal from a consumer market perspective through the eyes of an African capital markets practitioner and investment banker.

On a number of occasions in the past 50 years, forces for expansion, growth and economic empowerment in the African business environment have seemed to appear, only for the opportunities to fade. This time is different. As David Mataen explains, it is now Africa's moment to take its

place as the ultimate source of long-term business and investment opportunities. Meeting a demand for information on what is happening in the African business landscape and where the most exciting investment opportunities lie, Africa's Economic Moment elucidates Africa's robust investment case in a structured manner. It provides a concise, current analysis of the latest market dynamics; a description of the fundamental framework underpinning the growth of African markets; and the primary investment themes and strategies within seven key consumer sectors for the immediate future and the long term. This primer on the current state and future trajectory of the African economic situation will leave you more informed about the key themes and most important investment areas in the

The process of migration control mirrors the trajectories of the people who traverse national boundaries, making today's borders flexible and fluid. This book explores the transformation of migration control in the post 9/11 era. It looks at how border controls have become more diffuse in the face of increased human flows from Africa and presents a critical analysis of the dispositif of European migration control, including detention without trial, derogation of human rights law, torture, "extraordinary rendition", the curtailment of civil liberties and the securitization of migration. By examining the role of Gaddafi's Libya in the last ten years as a gendarme of

Europe, it argues for a re-visioning of borders and frontiers in ways that can account for their dialectical nature, and for the dialectical nature of political life. This text will be of key interest to scholars and students of European studies, African studies, security studies, international relations, global studies, comparative politics, cultural geography, migration studies and border theory.

For a long time, economic research on Africa was not seen as a profitable venture intellectually or professionally-few researchers in top-ranked institutions around the world chose to become experts in the field. This was understandable: the reputation of Africa-centered economic research was not enhanced by the well-known limitations of economic data across the

Continent. Moreover, development economics itself was not always fashionable, and the broader discipline of economics has had its ups and downs, and has been undergoing a major identity crisis because it failed to predict the Great Recession. Times have changed: many leading researchers-including a few Nobel laureates-have taken the subject of Africa and economics seriously enough to devote their expertise and creativity to it. They have been amply rewarded: the richness, complexities, and subtleties of African societies, civilizations, rationalities, and ways of living, have helped renew the humanities and the social sciences-and economics in particular-to the point that the continent has become the next major intellectual frontier to researchers from around the world. In

collecting some of the most authoritative statements about the science of economics and its concepts in the African context, this handbook (the first of two volumes) opens up the diverse acuity of commentary on exciting topics, and in the process challenges and stimulates the quest for knowledge. Wide-ranging in its scope, themes, language, and approaches, this volume explores, examines, and assesses economic thinking on Africa, and Africa's contribution to the discipline. The editors bring a set of powerful resources to this endeavor, most notably a team of internationally-renowned economists whose diverse viewpoints are complemented by the perspectives of philosophers, political scientists, and anthropologists.

This open access book analyses the development problems of sub-Saharan Africa (SSA) from the eyes of a Korean diplomat with knowledge of the economic growth Korea has experienced in recent decades. The author argues that Africa's development challenges are not due to a lack of resources but a lack of management, presenting an alternative to the traditional view that Africa's problems are caused by a lack of leadership. In exploring an approach based on mind-set and nation-building, rather than unity – which tends to promote individual or party interests rather than the broader country or national interests – the author suggests new solutions for SSA's economic growth, inspired by Korea's successful economic growth model much of which is focused on

This handbook constitutes a specialist single compendium that analyses African political economy in its theoretical, historical and policy dimensions. It emphasizes the uniqueness of African political economy within a global capitalist system that is ever changing and complex. Chapters in the book discuss how domestic and international political economic forces have shaped and continue to shape development outcomes on the continent. Contributors also provoke new thinking

on theories and policies to better position the continent's economy to be a critical global force. The uniqueness of the handbook lies in linking theory and praxis with the past, future, and various dimensions of the political economy of Africa.

There has been a long history of idealism concerning the potential of economic and political developments in Africa, the latest iteration of which emerged around the time of the 2007–8 global financial crisis. Here, Clive Gaby takes a historical approach to questions concerning change and international order as these apply to Africa in Western imaginaries. Challenging traditional postcolonial accounts that see the West imagine itself as superior to Africa, he argues that the centrality of

Uncommonly, this book turns its lens as much inwards as outwards, interrogating how changing attitudes to Africa over the course of the twentieth and early twenty-first centuries correspond to shifting anxieties concerning whiteness, and the growing hope that Africa will be the place where the historical genius of whiteness might be saved and perpetuated.

The volume analyses major strategic and policy issues. How to make Science, Technology and Innovation (STI) Policies relevant for inclusive

growth strategies in Africa so that socio-economic transformation strategies will take off. The first part discusses the issues of human skills development as part of STI policies, based on visions, strategic plans and country cases (for Cameroon, Nigeria and Mauritania). The second part looks at STI Policies for Economic Transformation, focussing on country case studies (for Egypt and Tunisia). A third part presents book reviews and book notes.

Two of the dominant themes of discussion in international relations scholarship over the last decade have been global governance and rising powers. Underlying both discussions are profound ethical questions about how the world should be ordered, who is responsible for addressing global

problems, how change can be managed, and how global governance can be made to work for peoples in developing as well as developed states. Yet, these are often not addressed or only briefly mentioned as ethical dilemmas by commentators. This book seeks to ask critical and profound questions about what relative shifts in power among states might mean for the ethics and practice of global governance. Three key questions are addressed throughout the volume: Who is rising and how? How does this impact on global governance? What are the implications of these developments for global ethics? Through these questions, some of the key academics in the field explore how far debates over global ethics are really between competing visions of how international

Society should be governed, as opposed to tensions within the same broad paradigm. By examining how governance works in practice across the Middle East, Africa and Asia, the contributors to this volume seek to critique the way global governance discourse masks the exercise of power by elites and states, both developed and rising. This work will be essential reading for all those with an interest in the future of international relations and global governance.

This book explores how changes that occurred around 1989 shaped the study of the social sciences, and scrutinizes the impact of the paradigm of neoliberalism in different disciplinary fields. The contributors examine the ways in which capitalism has transmuted into a seemingly

unquestionable, triumphant framework that globally articulates economics with epistemology and social ontology. The volume also investigates how new narratives of capitalism are being developed by social scientists in order to better understand capitalism's ramifications in various domains of knowledge. At its heart, Beyond Neoliberalism seeks to unpack and disaggregate neoliberalism, and to take readers beyond the analytical limitations that a traditional framework of neoliberalism entails. This book is a result of discussions at and support from the Irmgard Coninx Foundation.
