Yucca is a common succulent closely related to agaves. There are over 40 species of the spiky plant that grow throughout North America including the US, Mexico, and even one species in Canada! Additionally, they are common in parts of Central America and the Caribbean. Yucca species vary from small, low-lying shrub-like plants to huge, hundreds year old Joshua trees.

How to Get Your Yucca Plant to Flower | News Break

Most widespread is nolina (beargrass), which has leaves that are thinner, straighter, less rigid and more numerous. There are 14 US species. Dasyilirion (sotol) is a similar plant, notable for a row of tiny teeth along each leaf; it produces tall flower stalks, similar to an agave. Other yucca-like species include hechtia texensis (Texas false agave).

Agaves, Yuccas and Related Plants: A Gardener's Guide ...

Along with plants from the closely related genera Yucca, Hesperoyucca, and Hesperaloe, various Agave species are popular ornamental plants in hot, dry climates, as they require very little supplemental water to survive. Most Agave species grow very slowly. Some Agave species are known by the common name "century plant".
