The basic principles of design for aluminum structures are the same as those for other ductile metals such as steel. Equations and analysis techniques for global structural behavior such as load- deflection behavior are the same. Component strength, particularly buckling, post buckling, and fatigue, are defined specifically for aluminum alloys.

professionals who work with  
aluminum in structural applications,  
this comprehensive, up-to-date  
resource includes: The Specification  
for Aluminum Structures, which  
contains new provisions for block  
shear, pull-out strength of screws in  
screw chases, weld-affected strengths,  
post-weld heat treated strengths, new  
alloy-tempers, and flanges and webs  
with concentrated forces.
