colony: The queen, the female workers, and males. The queen and the males have wings, while the workers don ' t have wings.

~~Ants: Fun Facts about Ants & Ant Information for Kids~~

Ants will do just about anything to get the sugary secretions of sap-sucking insects, such as aphids or leafhoppers. To keep the honeydew in close supply, some ants herd aphids, carrying the soft-bodied pests from plant to plant. Leafhoppers sometimes take advantage of this nurturing tendency in ants and leave their young to be raised by the ants.

colonies that consist mainly of workers – sterile, wingless females. In July and August, winged males and females emerge for mating flights. They are about twice the size of the workers.

~~Black garden Ant | Facts About Black Ants - The RSPB~~

While both carpenter ants and termites can be very destructive to homes, the two species are different because termites eat the wood in which they tunnel, but carpenter ants only nest in it; they do not eat it. So another difference of carpenter ants is the frass (wood dust, soil, and insect parts) that is often found beneath openings to the nest.

What insects eat ants? Some common insects that regularly eat ants are spiders, flies, beetles, wasps, butterflies, and antlions. Surprisingly, some types of ants feed exclusively on other ants species. For instance, army ants are known to consume the larvae of some other ant species, and some fire ants feed on other fire ants.

Summarizes two decades of research on ants conducted in the Arizona desert in a revolutionary re-examination of how ant society is organized, how individual members make decisions, and how a colony evolves.
