App Inventor provides two components to facilitate database activity: TinyDB and TinyWebDB. TinyDB is used to store persistent data directly on the Android device; this is useful for highly personalized apps where the user won't need to share her data with another device or person, as in No Texting While Driving.

Creating an App Inventor App begins in your browser where you design how the app will look.

~~MIT App Inventor~~

Instead, App Inventor supports a SQL-like database called “Fusion Tables” and they have launched a new feature in “experimental” mode, called Firebase DB. Fusion tables are somewhat complex to set up (you have to login in to a Google developer’s console to create your Fusion table, set up various linkages) and then write special App Inventor code to link to the Fusion table.

App Inventor 2: Databases and Files is a step-by-step guide to writing apps that use TinyDB, TinyWebDB, Fusion Tables and data files for information storage and retrieval. Includes detailed explanations, examples, and a link to download sample code. This is the first tutorial to cover all of these App Inventor database and file features. App Inventor 2:

~~App Inventor 2 Databases And Files Step By Step Tinydb ...~~

Creating a Custom TinyWebDB Service (App Inventor 2) TinyWebDB is an App Inventor component that allows you to store data persistently in a database on the web. Because the data is stored on the web instead of a particular phone, TinyWebDB can be used to facilitate communication between phones and apps (e.g., multi-player games).

~~Custom TinyWebDB (App Inventor 2)~~

You can set it to any App Inventor compliant web service, that is, any site that has been setup especially for use with App Inventor and TinyWebDB. By default, TinyWebDB stores data at appinvtinywebdb.appspot.com. Be careful, though, as this web database is shared amongst all App Inventor programmers.

~~Web Databases — Appinventor~~

A database is a place where information or data can be stored until it is removed or replaced. Facebook uses a database to store usernames and corresponding passwords. Android devices have internal databases that store information about you or your phone. App Inventor allows us to access this database through the use of TinyDB.

~~App Inventor 2 Concepts~~

This app is a simple app that uses the CloudDB component to store data in the cloud, and allows multiple users of the app to communicate over multiple devices. Go to ai2.appinventor.mit.edu and start a new project. In the Designer, add the following components:
