Networks. And, at last it must be classified using neural network training algorithm. Following neural networks are used for training purposes with preprocessed image – Fully-connected multilayer feed-forward neural network trained with the help of back-propagation algorithm. For dimensionality reduction, Principal Component Analysis (PCA) is used.

## Applications of Neural Networks - Tutorialspoint

Artificial Neural Networks are used in Oncology to train algorithms that can identify cancerous tissue at the microscopic level at the same accuracy as trained physicians. Various rare diseases may manifest in physical characteristics and can be identified in their premature stages by using Facial Analysis on the patient photos.
