Matrix algebra We begin this chapter by briefly recalling some matrix algebra that you learned in previous courses. In particular, we review matrix arithmetic (matrix addition, scalar multiplication, the transpose, and matrix multiplication), linear transformations, and gaussian elimination (row reduction). Next we discuss matrix inverses.

The algebra of matrix follows some rules for addition and multiplication. Let us consider A , B and C are three different square matrices. A' is the transpose and A^{-1} is the inverse of A . I is the identity matrix and R is a real number. Now as per the rules of laws of matrices: $A+B = B+A$? Commutative Law of Addition.
