About Getting Organized (AutoLISP) AutoLISP programs can be very simple in nature, executing a few commands that you might commonly use throughout the a day. They can also be very complex, extracting and formatting information from blocks, and constructing the extracted information into a table. When you first get started, keep things simple and then once you feel comfortable with AutoLISP then start looking at conditional and looping statements. When you begin to develop an AutoLISP program, you should keep the following steps in mind: Think about which tasks you want to accomplish. Design the program. Write the code. Add comments and format the code for readability. Test and debug the program.

Focused around a hotel suite project, AutoCAD 2011 for the Interior Designer provides the Interior Design student with a non-intimidating, tutorial based, approach to learning the AutoCAD program. It accomplishes this by taking students that have no computer design experience from simple commands to complete projects in this single-semester sized text. This well organized and progressive approach to learning AutoCAD sets this text apart from others. The emphasis of this book is on easy to understand descriptions and instructions, allowing the non-technical, artistic, visual learning Interior Design student to quickly get past the fear of using the computer to produce drawings. The focus is entirely on the use of AutoCAD for the Interior Design field and not simply architectural drawings. Chapters alternate between command descriptions, which are organized by a command set category, and tutorials. This allows students to easily refer back to command descriptions without hunting through a tutorial that introduces commands as it progresses. The emphasis is on the practical use of commands used in the AutoCAD Classic workspace, rather than the multiple (and seldom used) command options. Multiple tutorials of the hotel suite, which includes floor plan, elevation views, dimensioning, and plotting, provide a practical application of the commands learned in the preceding chapters. Completely dimensioned drawings are provided at the beginning of each tutorial so that the advanced student, or an instructor led class, can complete them without going through the step-by-step process. This textbook is classroom proven and relevant interior design homework problems are provided. After completing this book, the student will be able to create all their 2-D Interior Design work using AutoCAD.
