Written by admin. SIMATIC S7-300 is the modular mini PLC system for the lower and medium performance ranges (Fig. 1.1). Different versions of the controllers allow the performance to be matched to the respective application. Depending on the requirements, the programmable controller can be expanded by input/output modules for digital and analog signals in up to four racks with eight modules each.

The legendary universal PLC. The SIMATIC S7-300 is used in many applications worldwide and has been proven successful millions of times. The SIMATIC S7-300 universal Controllers saves on installation space and features a modular design. A wide range of modules can be used to expand the system centrally or to create decentralized structures according to the task at hand, and facilitates a cost-effective stock of spare parts.

The SIMATIC automation system unites all the subsystems of an automation solution under a uniform system architecture to form a homogenous whole from the field level right up to process control. The Totally Integrated Automation (TIA) concept permits uniform handling of all automation components using a single system platform and tools with uniform operator interfaces.
