~~BD Vacutainer – Stanford University~~

The BD Vacutainer® Rapid Serum Tube (RST) Blood Collection Tube is a single use tube used to collect, separate, transport and process venous blood specimens to obtain serum for chemistry determinations for in vitro diagnostic use. It is used in settings where a venous blood sample is collected by a trained healthcare worker.

~~Vacutainer – BD~~

Vacutainer Guide Vacutainer tubes are often used to collect blood samples in venipuncture procedures. But some of them are used to collect urine and to separate serum. Some of them contain additives designed for analytical testing. To make it easy for a phlebotomist to know which tube to use, a vacutainer has color-coded covers.

~~Vacutainer Guide – E Phlebotomy Training~~

BD Vacutainer plastic tubes offer a safe method of blood collection and reduce the potential for tube breakage and specimen spillage, thereby reducing the potential for exposure to bloodborne pathogens. BD provides a full offering of Vacutainer® blood collection tubes in both glass and plastic. Hematology tubes.

Today, the gold standard in sample collection is the BD Vacutainer® product family, which U.S. hospitals rely on to enhance their sample quality and protect their nurses, phlebotomists and other caregivers from costly accidental ...

~~Specimen Collection—BD~~

A Vacutainer blood collection tube is a sterile glass or plastic tube with a closure that is evacuated to create a vacuum inside the tube facilitating the draw of a predetermined volume of liquid. Most commonly used to draw the blood samples directly from the vein. These tubes can also be used sometimes for the collection of urine samples.

~~COLOR CODES OF VACUTAINER TUBES AND ITS USES~~

The BD Vacutainer™ system is a closed system optimally designed and tested for controlling pre-analytical variability throughout the specimen collection and handling process. BD Seditainer™ tubes are designed for ESR determination without having to use a sedimentation pipette. Whole blood is drawn directly into the evacuated glass tube. Tubes are mixed by inverting the tube 180 ° and back, 8-10 times.
