They are subdivisions of the study of languages and together with phonetics, semantics and phonology contribute to the understanding of how a language is formed. Morphology deals with the understanding of how words are formed while syntax is focused on the way sentences are developed.

~~Difference Between Morphology and Syntax~~

Syntax is the study of the formation of sentences and morphology is the study of the formation of words. The final aim of both these fields is to study how meaning is produced in language. The main difference between morphology and syntax is that morphology studies how words are formed whereas syntax studies how sentences are formed.

Syntax. The term grammar is often used to refer to morphology (the study of word forms) and syntax (the study of sentence structure) together. Languages can be classified according to the grammatical principles which hold for them. Such classification is the subject of typology which is concerned with synchronic structure and not with genetic grouping.

The difference between syntax and morphology is that syntax deals with the structure of sentences and morphology deals with the structure of words. In any language, rules exist that guide the way that words are put together. These are the rules of syntax. Morphology is the study of how words are

~~What Is the Difference between Syntax and Morphology?~~

The term morphology is Greek and is a makeup of morph-meaning "shape, form", and -ology which means "the study of something". Morphology as a sub-discipline of linguistics was named for the first time in 1859 by the German linguist August Schleicher who used the term for the study of the form of words.[1]

The first chapter presents some evidence for the plausibility of a theory of grammar in which word syntax and phrasal syntax (which will be referred to as morphology and syntax respectively) are two distinct modules within a bigger syntactic module (cf. Jackendoff 1990, 1997, 2002, Ackema & Neeleman 2004), as well as evidence for the generation of compounds within word syntax/morphology.

This textbook provides a critical introduction to major research topics and current approaches in linguistic typology, the study of structural variation in human language and of the limits on that variation. Jae Jung Song draws on a wide range of cross-linguistic data to describe what linguistic typology has revealed both about language in general and about the rich variety of ways in which meaning and expression are achieved in the world's languages. Following an introduction to the subject matter and its history, the first part of the book explores theoretical issues and approaches, as well as practical considerations such as sampling methods and data collection. In the second part, chapters examine variation in particular phenomena, such as word order, case alignment, and evidentiality marking. Each chapter concludes with study

questions and suggestions for further reading. The volume will be suitable for undergraduate and graduate students in the fields of linguistic typology and language universals, and as secondary reading for cross-linguistically focused courses in phonology, morphology, syntax, and semantics.

The papers comprising this volume focus on a broad range of acquisition phenomena (subject dislocation, structural case, word order, determiners, pronouns, quantifiers and logical words) from different languages and language combinations. These include languages with large numbers of speakers (French, German, Spanish) and less frequently spoken ones (Norwegian, Russian, Swiss-German, Hebrew, Basque and Serbo-Croatian) within different language acquisition

scenarios and a wide range of populations. Most contributions adopt a common theoretical background within the generative approach with the aim to advance, discuss and critically analyse other research on first, bilingual and language impaired acquisition. The various sections of this stimulating volume reflect different theoretical and methodological perspectives of current research investigating morphology and syntax and offer diverging interpretations.
