Benchmarking is a comparative study which is designed to yield improvements in practices, processes or outcomes. For this reason benchmarking would be the wrong strategy to pursue when the problem identified relates to deficiencies which do not arise from operating procedures.

A GUIDE TO BENCHMARKING - Curtin University
A benchmark study measures and compares usability metrics against a baseline study. Benchmark studies are typically run on a regular basis (monthly, quarterly, yearly, etc.) to evaluate how your product ’ s experience has changed over time. These studies must have larger sample sizes, as compared to a basic qualitative (or formative) usability study, to make claims about positive and negative changes.

by Bob Camp The business improvement topic and quality tool called benchmarking is becoming widely understood and broadly applied. There are now applica firms that tions in almost all segments of the economy including industrial either produce a product or a service, non-profit organizations such as healthcare, government and education. The approach is starting to spread around the globe with initiatives in Europe, Asia Pacific and South America. This is commendable and reassuring and must show that there is significant interest in the approach and that it works. What is missing, however, are books and reference material that are not solely prepared in the US where benchmarking started. Theses would include examples of applications relevant to the local area and industries. They would include references to articles written about benchmarking appearing in local publications. In this fashion those interested would have near hand case histories of the use of benchmarking and therefore become encouraged to use the technique. Zairi and Leonard have done the benchmarking community a real service by documenting the European view and application of benchmark ing to a wide range of examples. But they have not stopped there. Their text includes treatment of a number of related facets of benchmarking that makes this a fairly thorough text.

With growing demands for increased operational efficiency and process improvement in organizations of all sizes, more and more companies are turning to benchmarking as a means of setting goals and measuring performance against the products, services and practices of other organizations that are recognized as leaders. The Benchmarking Book is an indispensable guide to process improvement through benchmarking, providing managers, practitioners and consultants with all the information needed to carry out effective benchmarking studies. Covering everything from essential theory to important considerations such as project management and legal issues, The Benchmarking Book is the ideal step-by-step guide to assessing and improving your company ’ s processes and performance through benchmarking.

From Newbery Medal-winning author Betsy Byars comes a sweet, entertaining story that will touch the heart of dog lovers at any age. A tornado appears in the distance, and the family quickly gathers into the storm cellar. The storm rages outside, but Pete, the farmhand, knows this is the perfect time to tell his stories about a dog named Tornado. Blown into their lives by a twister when Pete was a boy, Tornado was no ordinary dog—he played card tricks, saved a turtle ’ s life, and had a rivalry with the family cat. Forgetting their fear, the family hangs on every word of Pete ’ s stories—both happy and sad—of this remarkable dog.

The concept of "funds of knowledge" is based on a simple premise: people are competent and have knowledge, and their life experiences have given them that knowledge. The claim in this book is that first-hand research experiences with families allow one to document this competence and knowledge, and that such engagement provides many possibilities for positive pedagogical actions. Drawing from both Vygotskian and neo-sociocultural perspectives in designing a methodology that views the everyday practices of language and action as constructing knowledge, the funds of knowledge approach facilitates a systematic and powerful way to represent communities in terms of the resources they possess and how to harness them for classroom teaching. This book accomplishes three objectives: It gives readers the basic methodology and techniques followed in the contributors’ funds of knowledge research; it extends the boundaries of what these researchers have done; and it explores the applications to classroom practice that can result from teachers knowing the communities in which they work. In a time when national educational discourses focus on system reform and wholesale replicability across school sites, this book offers a counter-perspective stating that instruction must be linked to students’ lives, and that details of effective pedagogy should be linked to local histories and community contexts. This approach should not be confused with parent participation programs, although that is often a fortuitous consequence of the work described. It is also not an attempt to teach parents "how to do school" although that could certainly be an outcome if the parents so desired. Instead, the funds of knowledge approach attempts to accomplish something that may be even more challenging: to alter the perceptions of working-class or poor communities by viewing their households primarily in terms of their strengths and resources, their defining pedagogical characteristics. Funds of Knowledge: Theorizing Practices in Households, Communities, and Classrooms is a critically important volume for all teachers and teachers-to-be, and for researchers and graduate students of language, culture, and education.

In 1997, Congress, in the conference report, H.R. 105-271, to the FY1998 Energy and Water Development Appropriation Bill, directed the National Research Council (NRC) to carry out a series of assessments of project management at the Department of Energy (DOE). The final report in that series noted that DOE lacked an objective set of measures for assessing project management quality. The department set up a committee to develop performance measures and benchmarking procedures and asked the NRC for assistance in this effort. This report presents information and guidance for use as a first step toward development of a viable methodology to suit DOE ’ s needs. It provides a number of possible performance measures, an analysis of the benchmarking process, and a description ways to implement the measures and benchmarking process.
