Chapter 9 Study Guide - McGraw Hill Textbook. Used to show what a chemical reaction yields (same as =); used to separate the reactants from the product. Left side items are reactants and right side items are the product. (g) = gas; (aq) = water; (l) = liquid. these symbols used to denote the state of the reactants and products in an accurate balanced chemical equation.

374 Chapter 9 Oxidation-Reduction Reactions

Electrons are rarely found unattached to atoms. Thus, for one element or compound to lose electrons and be oxidized, another element or compound must be there to gain the electrons and be reduced. In other words, oxidation (loss of electrons) must be accompanied by reduction (gain of electrons).

Access Free Chapter 9 Chemical Reactions Answers

As we noted in Chapter 9.2 the heat released by a reaction carried out at constant volume is identical to the change in internal energy (ΔE) rather than the enthalpy change (ΔH); ΔE is related to ΔH by an expression that depends on the change in the number of moles of gas during the reaction. The difference between the heat flow measured at constant volume and the enthalpy change is usually quite small, however (on the order of a few percent).
