Japanese literature and film have frequently been approached using lenses such as language, genre and ideology. Yet, despite a succession of major social traumas that have marked, and in many ways shaped and defined much of modern Japan, Japanese fiction and cinema have not often been examined psychoanalytically. In this book, David Stahl conducts in-depth readings and interpretations of a set of Japanese novels and film. By introducing the methodology of trauma/PTSD studies, Stahl seeks to provide a better understanding of the insights of Japanese writers and directors into their societies, cultures and histories. In particular, by building on the work of practitioner-theoreticians, such as Pierre Janet and Judith Herman, Stahl analyses a number of key texts, including Kawabata Yasunari's *Sleeping Beauties* (1961), Enchi Fumiko's *Female Masks* (1958) and Imamura Sho- hei's *Vengeance is Mine* (1979). Consequently, through using concepts of social trauma, dissociation, failed mourning, revenge and narrative memory, this book sheds new light on the psychological aftereffects and transgenerational legacies of trauma depicted in Japanese

works. Trauma, Dissociation and Re-enactment in Japanese Literature and Film will be of interest to students and scholars of Japanese Literature and Cinema, as well as those interested in Japanese History and Trauma Studies.

This third edition updates and expands the material presented in the best-selling first and second editions of Basic Hazardous Waste Management. It covers health and safety issues affecting hazardous waste workers, management and regulation of radioactive and biomedical/infectious wastes, as well as current trends in technologies. While the topics have been completely revised, the author employs the same practical approach that made the previous editions so popular. Chapters are structured to first outline the issue, subject, or technology, then to describe generic practice, and then to conclude with a summary of the statutory or regulatory approach. Blackman introduces fundamental issues such as human health hazards; the environmental impacts of toxic, reactive, and ignitable materials; the mobility, pathways and fates of released hazardous materials; and the roles of science, technology, and risk assessment in the standards-setting process. He explores hazardous waste site remediation technology, and the application of federal statutes, regulations, programs, and policies to the cleanup of contaminated sites. This text provides an introductory framework-which can serve as the foundation for a program of study in traditional as well as
