Phencyclidine
(PCP, angel
dust, peace
pill, cadillac,
crystal joints,
DOA) was
synthesized in
the 1960s by
Parke–Davis
Laboratories.
The drug was
originally
intended for use
as a surgical

Access Free Clinical

anesthetic, but it was found to produce violent postoperative psychosis (1,2). Because of its side effects, which included muscular rigidity as well as nightmares and frank delirium with frightening

Access Free Clinical

hallucinations
and delusions,
PCP was removed
from the market
for human use a
few years after
its
introduction.

BACKGROUND. PCP
(1-1-phenylcyclo
hexyl
piperidine) is a
synthetic
hallucinogen,
that has a
variety of
street names,

Access Free Clinical

including "angel
dust," "dust,"
and "sherms" .
These names,
along with
others, reflect
its
unpredictable
and volatile
effects.
