Modelling and simulation of a ridge waveguide and a Mach - Zehnder interferometer was done. An optical ridge waveguide is made; width was chosen as 3 microns for 1550 nm wavelength electromagnetic wave. Substrate material chosen was Sapphire, over which 300 nm LiNbO 3 was chosen as the waveguide material. The geometry is done in 3D model.

In this work COMSOL Multiphysics was applied to the full 3D electromagnetic wave simulation of a novel forked grating coupler designed to interface with vortex modes of 1550 nm wavelength light. Full 3D models were solved for the radiating vector mode from a forked grating emitter structure driven from a nanophotonic waveguide.
