In order for the oven to function correctly, it requires an adequate supply of cool air.

Ensure that the air flow is not impaired (e.g. insulation in the cabinetry). Also be sure that the cool

air supply is not heated by other sources nearby. If the oven is installed behind a cabinet door, do not close the door while the oven is in operation.

So cooking in a convection oven means you'll have to convert. This is a fairly simple matter of either lowering the temperature

Oven shortening  
the cooking time  
(or a bit of  
both). The  
simplest method  
is to set the  
oven 25 to 50  
degrees lower  
than the recipe  
says. So if it  
says 400 F, you  
go with 375 or  
350 F.
