- the Denon AVR-2800's remote kicks ass. The JVC one sucks, and can only control off-brand video equipment (no non-JVC audio equipment) -- and doesn't even do very well at that. The Denon one is initially not much better until you take into account the fact that it has learning capability.

DENON AVR-2800 No sound from any channel. - diyAudio

Denon says there's a new app coming, made with tablets in mind, but for now, this is fit for purpose if not the most extensive that we've seen. The seven speaker terminals can be wired up as a standard seven-channel setup, or by using the surround back terminals to power a pair of Dolby Atmos upward-firing speakers instead. Denon points out that, in DTS-ES Matrix 6.1 mode, the 5800 uses a specific logic matrix developed by DTS, not the generic one that they claim other receivers use. The Denon also features 24-bit/192kHz D/A converters and a powerful 7-channel amplifier section.
