Designated Drivers: How China Plans to Dominate the Global Auto Industry is an interesting book that looks at China from the vantage point of several disciplines, including economics, political science and business. On the one hand it is an informed resource on how industries move forward in China, with the Automotive sector providing a backdrop.

Designated Drivers: How China Plans to Dominate the Global ...

More than a thorough accounting of China's automotive ambitions, Designated Drivers is a primer on the quintessential challenge China presents to the West across every sector: understanding the logic and forces at play in China's drive for national wealth and security. In tracking the motives and behavior of regulators and planners, locally and centrally controlled enterprises, banks, privately owned companies and of course, the foreign companies doing business in China, Anderson's ...

An in-depth look at the Chinese car industry that sheds new light on the delicate nature of China's planned economy China's unprecedented growth over the last three decades, along with the recent financial crisis in the West, has raised questions about the superiority of state-led capitalism. In *Designated Drivers: How China Plans to Dominate the Global Auto Industry*, G.E. Anderson, a specialist in finance and Chinese political economics, uses the auto industry to examine how China's industrial planning works, and explores whether state involvement in the economy really is a winning formula for sustainable growth. Bringing to light the strengths and weaknesses that define the Chinese economy, Anderson finds that in some ways the government has become its own worst enemy, unable to choose between industrial competitiveness and social stability. While the economy is booming now,

Access Free Designated Drivers How China Plans To Dominate The Global Auto Industry

evidence suggests that long-term success is far from assured. Tracing the evolution of the post-Mao auto industry through thirteen case studies, *Designated Drivers* raises the difficult questions about the future of China that few people have dared to ask. Offers a unique insight into the Chinese economy through the lens of the auto industry Explores how successful the central government has been in spurring economic growth and the long-term costs of intervention Uses case studies to illustrate China's explosive growth over the last three decades A painstakingly researched analysis of the Chinese automobile industry, *Designated Drivers* explains the risks and rewards inherent in doing business in China that anyone interested in, or already working there need to understand.

Offers insight into the Chinese economy through the lens of the auto industry, uses case studies to illustrate China's explosive growth over the last three decades, and explores the strengths and weaknesses of the Chinese economy.

Why has “car society” proven so durable, even in the face of mounting environmental and economic crises? In this follow-up to his magisterial *Atlantic Automobility*, Gijs Mom traces the global spread of the automobile in the postwar era and investigates why adopting more sustainable forms of mobility has proven so difficult. Drawing on archival research as well as wide-ranging forays into popular culture, Mom reveals here the roots of the exuberance, excess, and danger that define modern automotive culture.

In *Inside China's Automobile Factories*, Lu Zhang explores the current conditions, subjectivity, and collective actions of autoworkers in the world's largest and fastest-growing automobile manufacturing

Access Free Designated Drivers How China Plans To Dominate The Global Auto Industry

nation. Based on years of fieldwork and extensive interviews conducted at seven large auto factories in various regions of China, Zhang provides an inside look at the daily factory life of autoworkers and a deeper understanding of the roots of rising labor unrest in the auto industry. Combining original empirical data and sophisticated analysis that moves from the shop floor to national political economy and global industry dynamics, the book develops a multilayered framework for understanding how labor relations in the auto industry and broader social economy can be expected to develop in China in the coming decades.

China is on track to exceed the United States as the world's largest economy in the next several years. It is already the leading global trading nation. Even though its growth rate has recently slowed from years past, China has had the fastest yearly growth rate of any country for much of the last three decades. In *China's Economy: What Everyone Needs to Know*, Arthur Kroeber offers an overview of the highlights of China's development since economic reforms were initiated under Deng Xiaoping in 1979. He argues that manufacturing, agricultural change, and construction reoriented the economy in the 1980s and 1990s through state-owned enterprises, private entrepreneurship, and foreign investment. Those shifts unleashed perhaps the largest migration ever in world history from rural areas to urban centers, accompanied by a no less unprecedented expansion of infrastructure. Changes in the country's fiscal and financial systems vastly increased China's monetary holdings from the 1990s onwards, leading to the country's strategic holding of more U.S. debt than any other nation. Kroeber also examines economic growth as it has been experienced by Chinese workers and consumers, including the mounting problems of income and wealth inequality, corruption, and environmental degradation. Kroeber ultimately turns to the consequences of Chinese economic growth: its decisive impact on the world economy, its visible and

challenging resource extraction from Africa and Latin America, and its increasing engagement with global economic institutions.

Analysing developments in digital technologies and institutional changes, this book provides an overview of the current frenetic state of transformation within the global automobile industry. An ongoing transition brought about by the relocation of marketing, design and production centres to emerging economies, and experimentation with new mobility systems such as electrical, autonomous vehicles, this process poses the question as to how original equipment manufacturers (OEMs) and newcomers can remain competitive and ensure sustainability. With contributions from specialists in the automobile sector, this collection examines the shifts in power and geographical location occurring in the industry, and outlines the key role that public policy has in generating innovation in entrepreneurial states. Offering useful insights into the challenges facing emerging economies in their attempts to grow within the automobile industry, this book will provide valuable reading for those researching internationalization and emerging markets, business strategy and more specifically, the automotive industry.

Today, a large proportion of the world's states are under authoritarian governments. These countries limit participation rights, both in the political sphere and in the workplace. At the same time, they have to generate consent in the workplace in order to ensure social stability and prevent the escalation of conflicts. But how do companies generate consent given that employee voice and interest representation may be limited or entirely absent? Based on a review of research literature from sociology, organizational psychology, and behavioural economics, this book develops a theory of consent

Access Free Designated Drivers How China Plans To Dominate The Global Auto Industry

generation and distinguishes three groups of consent-producing mechanisms: socialization, incentive mechanisms, and participation and interest representation. It presents an empirical analysis of how these mechanisms work in Russian and Chinese automotive factories and shows how socio-cultural factors and labour regulation explain the differences between both countries regarding consent and control in the workplace. The book contributes to two research debates. First, it examines the generation of consent in the workplace—a core topic of the sociology of work and organization. Its particular focus is on consent generation in authoritarian societies. Secondly, the book contributes to the debate about the reasons for the completely different trajectories of post-communist Russia and China. The book provides an empirical analysis that explains the different work behaviours of employees in both countries and links the micro-level of the workplace and the macro-level of institutions and organizational cultures.

How the radical disruption of the auto industry affects you—and how you can prepare for the soon-to-be “new normal” The combined effect of autonomous driving, electric vehicles, and the sharing economy is on the verge of changing the auto industry—all within the next decade. And this tech/economics revolution will touch virtually every industry. What exactly will change? Jobs: Demand for commercial vehicle drivers, car dealers, mechanics, doctors, and many other professions will shrink Laws: Manually driving cars will be forbidden—and car ownership will be almost nonexistent Housing: Prices will drop and cities and towns will be planned differently Healthcare: Infrastructure will shrink as traffic accidents dramatically decline Global trade: China will become the world’s biggest automotive exporter The Last Driver License Holder Has Already Been Born provides the information and insight you need to position your company for these groundbreaking changes. It reveals the disruptive technologies now taking shape and provides a timeline of when they will take hold. It examines the impact on the industry itself, as well

Access Free Designated Drivers How China Plans To Dominate The Global Auto Industry

as adjacent sectors, including jobs and professions, city and street design, hospitals, insurances, politics, security, hospitality industry, the oil industry, real estate, and society at large. And it provides the knowledge and insight you need to keep yourself and your organization ahead of the curve—and in front of the competition.

After more than three decades of average annual growth close to 10 percent, China's economy is transitioning to a 'new normal' of slower but more balanced and sustainable growth. Its old drivers of growth -- a growing labor force, the migration from rural areas to cities, high levels of investments, and expanding exports -- are waning or having less impact. China's policymakers are well aware that the country needs new drivers of growth. This report proposes a reform agenda that emphasizes productivity and innovation to help policymakers promote China's future growth and achieve their vision of a modern and innovative China. The reform agenda is based on the three D's: removing Distortions to strengthen market competition and enhance the efficient allocation of resources in the economy; accelerating Diffusion of advanced technologies and management practices in China's economy, taking advantage of the large remaining potential for catch-up growth; and fostering Discovery and nurturing China's competitive and innovative capacity as China approaches OECD incomes in the decades ahead and extends the global innovation and technology frontier.
