Which oil does my car need? Find the right viscosity | The AA

Let us say you have a fully synthetic oil whose SAE rating reads 5W-30. The 5W means that the oil has been tested at colder temperatures and that it has a viscosity grade of 5 and with the “W” referring to winter. The 30 reflects the viscosity grade of the oil when the engine temperature is at 212 ° F. If you live in a colder environment, a 5W rating oil will be able to start your engine a lot sooner than a 10W rated oil.

Oil Labelling Explained - TechWiki

The viscosity grade of a motor oil provides information on the oil's resistance to flow inside the engine. A lubricant with a low viscosity grade will be more fluid, more liquid, and will flow more easily. Inversely, the higher the grade, the thicker the oil, slowing its flow to help form a protective film across engine parts.
