Distributed computing is a field of computer science that studies distributed systems. A distributed system is a system whose

Online Library Distributed Control System Wikipedia

components are located on different networked computers, which communicate and coordinate their actions by passing messages to one another. The components interact with one another in order to achieve a common goal. Three significant characteristics of distributed systems

Online Library Distributed Control System Wikipedia

are: concurrency of components, lack of a global clock, and independent failure of components. Example

Distributed computing - Wikipedia
Git (/ ɪ ˈ t /) is a distributed version-control system for tracking changes in source code during software

Online Library Distributed Control System Wikipedia

development. It is designed for coordinating work among programmers, but it can be used to track changes in any set of files. Its goals include speed, data integrity, and support for distributed, non-linear workflows [clarification needed]. Git was created by Linus Torvalds in 2005

Git - Wikipedia

A distributed control system (DCS) is a digital process control system for a process or plant, wherein controller functions and field connection modules are distributed throughout the system.

Online Library Distributed Control System Wikipedia

As the number of control loops grows, DCS becomes more cost effective than discrete controllers.

Industrial control system - Wikipedia
A control system manages, commands, directs, or regulates the behavior of other devices or systems

Online Library Distributed Control System Wikipedia

using control loops. It can range from a single home heating controller using a thermostat controlling a domestic boiler to large Industrial control systems which are used for controlling processes or machines. For continuously modulated control, a feedback controller is used to

Online Library Distributed Control System Wikipedia

automatically control a process or operation. The control system compares the value or status of the process variable b_{ei}

Control system - Wikipedia

A distributed control system involves the placement of multiple controllers

Online Library Distributed Control System Wikipedia

within a plant or manufacturing process. The controllers are networked to a central console. DCSs aim to centralize plant operations to allow control, monitoring, and reporting of individual components and processes at a single location.
