Griffiths Chapter 2 Solutions

Solution: The simplest method is to chop the line into symmetrically placed pairs (at $\pm x$), quote the result of Ex. 2.1 (with $d/2 \rightarrow x$, $q \rightarrow dx$), and integrate ($x : 0 \rightarrow L$). But here's a more general

Electrodynamics Griffiths

Chapter 2 Solutions

Finally, we take the vector sum of all these individual forces: $F = F_1 + F_2 + F_3 + \dots$ To solve the force on Q using the superposition principle sounds very easy, BUT, the force on Q depends not only on the separation distance r between the charges,
