I started in embedded system design in the early 1980's. I designed and built embedded computers based on Zilog, Intel, and Motorola processors and peripheral chips to interface to the outside world. I wrote the "firmware" to interface to the computer outside so that it could read laser interferometers, optical and magnetic scales ...

Yanbing Li, Jörg Henkel, in Readings in Hardware/Software Co-Design, 2002. Abstract. Embedded system design is one of the most challenging tasks in VLSI CAD because of the vast amount of system parameters to fix and the great variety of constraints to meet. In this paper we focus on the constraint of low energy dissipation, an indispensable peculiarity of embedded mobile computing systems.
