Worldwide Emergence of Drug-Resistant Infections ~~Emergence Infection~~

Many (60 to 80%) emerging infections are derived from an animal source. Infectious disease emergence can be viewed operationally as a two-step process: introduction of the agent into a new host...

~~Emerging infections: how and why they arise – GOV.UK~~

An emerging infectious disease (EID) is an infectious disease whose incidence has increased recently (in the past 20 years), and could increase in the near future. Such diseases do not respect national boundaries. The minority that are capable of developing efficient transmission between humans can become major public and global concerns as potential causes of epidemics or pandemics.

~~Emerging infectious disease – Wikipedia~~

Given the complexity of zoonotic disease emergence and transmission, it is very rare that an outbreak can be traced back to the first identified human or animal case – known as the ‘index case’ and this remains a substantial challenge.

Coronavirus disease 2019 (COVID-19) is a contagious respiratory and vascular disease caused by severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2). First identified in Wuhan, China, it has caused an ongoing pandemic.. Common symptoms of COVID-19 include fever, cough, fatigue, breathing difficulties, and loss of smell and taste. Symptoms begin one to fourteen days after exposure to the ...

~~Coronavirus disease 2019 – Wikipedia~~

Viral emergence in humans is often a consequence of zoonosis, which involves a cross-species jump of a viral disease into humans from other animals. As zoonotic viruses exist in animal reservoirs, they are much more difficult to eradicate and can therefore establish

The emergence of fungi, such as *Aspergillus* spp., and other opportunistic agents that were previously uncommon or unrecognized as human pathogens is related primarily to an increase in infection-susceptible populations, such as those having undergone cancer chemotherapy, organ and tissue transplantation, or having become infected with HIV (Dixon et al., 1996). In some oncology and transplant hospital units more than 10 percent of patients are colonized or infected with vancomycin-resistant ...
