Asia, jasmine has been cultivated since the time of Christ. Jasmine spread from Asia throughout the Old World by antiquity. In Africa, superstition attended the cultivation of jasmine. Some Africans believed that the species *Jasminum angulare* protected one from lightning. Kenyans made the stems of jasmine plants into rope.

The Encyclopedia of Cultivated Palms is the definitive account of all palms that can be grown for ornamental and economic use. Palms are often underutilized as a result of their unfamiliarity—even to tropical gardeners. To help introduce these valuable plants to a new audience, the authors have exhaustively documented every genus in the palm family. 825 species are described in detail, including cold hardiness, water needs, height, and any special

# Online Library Encyclopedia Of Cultivated Plants

requirements. Generously illustrated with more than 900 photos, including photos of several palm species that have never before appeared in a general encyclopedia, The Encyclopedia of Cultivated Palms is as valuable as an identification guide as it is a practical handbook. Interesting snippets of history, ethnobotany, and biology inform the text and make this a lively catalog of these remarkable plants.

Unlike some other reproductions of classic texts (1) We have not used OCR(Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.

Cultivated Plants, Primarily as Food Sources is a component of Encyclopedia of Food and Agricultural Sciences, Engineering and Technology Resources in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. Global food demand is forecast to double and possible triple, by the year 2050, when more than 10 billion people will need to be fed worldwide. To ensure adequate nutrition

# Online Library Encyclopedia Of Cultivated Plants

for this growing population food production must be expanded faster than the population. Following a longer introduction chapter with some information on the history of crop production, the land used for agriculture, the cropping systems and the future trends, comes the knowledge in depth: The grain and cereal, the edible been plants, the vegetables and plants for edible starch, oil, sugar and beverage production, the fruits and nuts, the fiber, forage and industrial crops. Each subject contains glossary and bibliography for better and deeper understanding. At each important plant the history, the production technology, the importance of the crop in nutrition of growing population, the feeding value, some short case stories, and the future trends are discussed. When considering plant foods in relation to human health, it should be remembered that plant foods may also have health value in addition to their nutritional value. It would seem possible to modify the composition of plant foods as to improve human health. In developing countries, poverty leads to food shortage and under nutrition and many populations survive largely on plant-based diets. In industrialized countries, relative affluence leads to over consumption of food and especially to over-consumption of animal foods at the expense of plant foods. These two volumes, cultivated plants, primarily as food sources, help to get more detailed knowledge to overcome the mentioned problem of the World. These volumes are aimed at the following five major target audiences: University and College Students Educators, Professional Practitioners, Research Personnel and Policy Analysts, Managers, and Decision Makers, NGOs and GOs.
