This collection of essays assesses the record of American foreign policy over the course of the twentieth century. The essays comprise the work of political scientists as well as historians, conservatives as well as liberals, foreign scholars as well as Americans. Taking off from Henry Luce's vision of an 'American century', the authors discuss such important topics as the American conception of the national interest, the tension between democracy and capitalism, the US role in both the developed and underdeveloped worlds, party politics and foreign policy, the significance of race in American foreign relations, and the cultural impact of American diplomacy on the world at large. The result is a lively collection of essays by authors who often disagree but who nonetheless provide the reader with keen insights about the past and provocative views of the future.

In rethinking and reframing the American national narrative in a wider context, the contributors to this volume ask questions about both nationalism and the discipline of history itself. The essays offer fresh ways of thinking about the traditional themes and periods of American history. By locating the study of American history in a transnational context, they examine the history of nation-making and the relation of the United States to other nations and to transnational developments. What is now called globalization is here placed in a historical context. A cast of distinguished historians from the United States and abroad examines the historiographical implications of such a reframing and offers alternative interpretations of large questions of American history ranging from the era of European contact to democracy and reform, from environmental and economic development and migration experiences to issues of nationalism and identity. But the largest issue explored is basic to all histories: How does one understand, teach, and write a national history even as one recognizes that the territorial boundaries do not fully contain that history and that within that bounded territory the society is highly differentiated, marked by multiple solidarities and identities? Rethinking American History in a Global Age advances an emerging but important conversation marked by divergent voices, many of which are represented here. The various essays explore big concepts and offer historical narratives that enrich the content and context of American history. The aim is to provide a history that more accurately reflects the dimensions of American experience and better connects the past with contemporary concerns for American identity, structures of power, and world presence.

In the 1960s and 70s, a new youth consciousness emerged in Western Europe which gave this period its distinct character. This volume demonstrates how international developments fused with national traditions, producing specific youth cultures that became leading trendsetters of emergent post-industrial Western societies.
