A book on those who know and use two or more languages: Who are they? How do they do it?

The Psycholinguistics of Bilingualism presents a comprehensive introduction to the foundations of bilingualism, covering language processing, language acquisition, cognition and the bilingual brain. This thorough introduction to the psycholinguistics of bilingualism is accessible to non-specialists with little previous exposure to the field. Introduces students to the methodological approaches currently employed in the field, including observation, experimentation, verbal and computational modelling, and brain imaging. Examines spoken and written language processing, simultaneous and successive language acquisition, bilingual memory and cognitive effects, and neurolinguistic and neuro-computational models of the bilingual brain. Written in an accessible style by two of the field's leading researchers, together with contributions from internationally-renowned scholars. Featuring chapter-by-chapter research questions, this is an essential resource for those seeking insights into the bilingual mind and our current knowledge of the cognitive basis of bilingualism.

Many people consider bilinguals to be exceptional, yet almost half the world's population speaks more than one language. Bilingualism is found in every country of the world, in every class of society, in all age

groups. *Life with Two Languages* is the first book to provide a complete and authoritative look at the nature of the bilingual experience. François Grosjean, himself a bilingual, covers the topic from each of its many angles in order to provide a balanced introduction to this fascinating phenomenon. Grosjean discusses the political and social situations that arise when languages come into contact and the policies nations have established toward their linguistic minorities in the domains of education and governance. Of particular interest is his detailed account of the psychological and social factors that lead a bilingual to choose one of her languages when speaking to another bilingual or to use both languages in the fascinating phenomenon of code-switching. The author explains how children become bilingual as quickly as they become monolingual, describes the organization of languages in the bilingual brain, and examines the legacy of bilingualism on language, as exemplified in word borrowings. Above all, *Life with Two Languages* puts the emphasis on the bilingual person. In a series of first-hand reports scattered throughout the book, bilinguals tell what it is like to live with two languages and describe the educational and social experiences they have undergone. Written in a clear and informative style, *Life with Two Languages* will appeal to professionals and students in linguistics, education, sociology, and psychology, as well as to the more casually curious.

This book explores the life and experiences of one of the world's most renowned and well-respected experts in bilingualism. François Grosjean takes us through his life, from his monolingual childhood in a small village outside Paris to the long periods of time he spent in Switzerland, England, France, and the United States, becoming bilingual and bicultural in the process. During his life, his dominant language has changed many times between English and French, and he has also acquired, and subsequently lost, other languages, including American Sign Language. Throughout the book, he combines his personal accounts and anecdotes with insights from and reflections on his extensive scholarly research in bilingualism and biculturalism,

which has, in turn, been heavily influenced by his own experiences. Written in an engaging and accessible style, the book will appeal to general readers interested in bilingualism and language contact, educators and parents of bilingual children, researchers working on bilingualism, and to bilinguals themselves.

A vital resource on speech and language processing in bilingual adults and children *The Listening Bilingual* brings together in one volume the various components of spoken language processing in bilingual adults, infants and children. The book includes a review of speech perception and word recognition; syntactic, semantic, and pragmatic aspects of speech processing; the perception and comprehension of bilingual mixed speech (code-switches, borrowings and interferences); and the assessment of bilingual speech perception and comprehension in adults and children in the clinical context. The two main authors as well as selected guest authors, Mark Antoniou, Theres Gr ü ter, Robert J. Hartsuiker, Elizabeth D. Pe ñ a and Lisa M. Bedore, and Lu-Feng Shi, introduce the various approaches used in the study of spoken language perception and comprehension in bilingual individuals. The authors focus on experimentation that involves both well-established tasks and newer tasks, as well as techniques used in brain imaging. This important resource: Is the first of its kind to concentrate specifically on spoken language processing in bilingual adults and children. Offers a unique text that covers both fundamental and applied research in bilinguals. Covers a range of topics including speech perception, spoken word recognition, higher level processing, code-switching, and assessment. Presents information on the assessment of bilingual children ' s language development Written for advanced undergraduate students in linguistics, cognitive science, psychology, and speech/language pathology as well as researchers, *The Listening Bilingual* offers a state-of-the-art review of the recent developments and approaches in speech and language processing in bilingual people of all ages.

If languages influence the way we think, do bilinguals think differently in their respective languages? And if languages do not affect thought, why do bilinguals often perceive such influence? For many years these questions remained unanswered because the research on language and thought had focused solely on the monolingual mind. Bilinguals were either excluded from this research as 'unusual' or 'messy' subjects, or treated as representative speakers of their first languages. Only recently did bi- and multilinguals become research participants in their own right. Pavlenko considers the socio-political circumstances that led to the monolingual status quo and shows how the invisibility of bilingual participants compromised the validity and reliability of findings in the study of language and cognition. She then shifts attention to the bilingual turn in the field and examines its contributions to the understanding of the human mind.

This edited book presents an detailed analysis of the experience of deaf people as a bilingual-bicultural minority group in America. An overview of mainstream research on bilingualism and biculturalism is followed by specific research and conceptual analyses which examine the impact of cultural and language diversity on the experiences of deaf people. The book ends with poignant personal reflections from deaf community members. The contributors include prominent deaf and hearing experts in bilingualism, ASL and Deaf culture, and deaf education.

The alternating use of languages by bilingual speakers in a social, grammatical, and psycholinguistic context.
