Wobbe Index: The Wobbe Index (WI) is the main indicator of the interchangeability of fuel gases and is frequently defined in the specifications of gas supply and transport utilities. Wobbe Index is used to compare the combustion energy output with different composition of fuel gases. If two fuels have identical Wobbe Indices then

General Information Wobbe Index and Calorimeters
The Wobbe Index or Wobbe number is an indicator of the interchangeability of fuel gases such as natural gas, liquefied petroleum gas, and town gas and is frequently defined in the specifications of gas supply and transport utilities. If V_C is the higher heating value, or higher calorific value, and G_S is the specific gravity, the Wobbe Index, I_W , is defined as: $I_W = \frac{V_C}{G_S}$.

Wobbe Index - Wikipedia
The Wobbe Index indicates the interchange ability of a fuel gas and is the best indicator of similarity between natural gas and a specific propane-air mixture. Since the Wobbe index relates heating characteristics of blended fuel gases it can be used to obtain constant heat flows from gases of varying compositions.

Fuel Gases and Wobbe Index - Engineering ToolBox
The Wobbe index is the ratio of the specific energy of a gas to its relative flow rate as shown by its constituent components: $H \cdot R \cdot V$. **HHV** - The Higher Heating Value, which is a measure of the energy per volume for the gas being considered. **RD**.

Wobbe Index | Neutrium
The Wobbe index is a measurement of the degree to which fuels such as natural gas and propane can be interchanged. It is an important measure for appliances that use these fuels, as a gas line to one's house can carry gas supplied from a variety of different sources and suppliers.
