Server environment. Topics include developer tools, security, and debugging.

Oracle GlassFish Server Online Documentation Library

Accessing the Naming Context. The Oracle GlassFish Server provides a naming environment, or context, which is compliant with standard Java EE requirements. A Context object provides the methods for binding names to objects, unbinding names from objects, renaming objects, and listing the bindings. The InitialContext is the handle to the Java EE naming service that application components and

File Type PDF Glassfish Application Development Clients use for lookups.

Using the Java Naming and Directory Interface

This project is now part of the EE4J initiative; this repository has been archived as all activities are now happening in the corresponding Eclipse repository. See here for the EE4J transition status.
