Mr Naylor says the government's new guidance on cycle infrastructure design will be a 'game changer'. He adds: "Those not 'playing by the new rules' risk being identified as losers by the..."

Slow Cities: Conquering Our Speed Addiction for Health and Sustainability demonstrates, counterintuitively, that reducing the speed of travel within cities saves time for residents and creates more sustainable, liveable, prosperous and healthy environments. This book examines the ways individuals and societies became dependent on transport modes that required investment in speed. Using research from multiple disciplinary perspectives, the book demonstrates ways in which human, economic and environmental health are improved with a slowing of city transport. It identifies effective methods, strategies and policies for decreasing the speed of motorised traffic and encouraging a modal shift to walking, cycling and public transport. This book also offers a holistic assessment of the impact of speed on daily behaviours and life choices, and shows how a move to slow down will - perhaps surprisingly - increase accessibility to the city services and activities that support healthy, sustainable lives and cities. Includes cases from cities in North and South America, Europe, Asia, Africa and Australasia Uses evidence-based research to support arguments about the benefits of slowing city transport Adopts a broad view of health, including the health of individuals, neighbourhoods and communities as well as economic health and environmental health Includes text boxes, diagrams and photos illustrating the slowing of transport in cities throughout the world, and a list of references including both academic sources and valuable websites

This collection deals with the impacts of climate change, focusing on urban regions and heritage-related scenarios. It assesses the effects of climate change on our cultural and natural heritage, disaster management, adaptation to climate change, and sustainability in building and urban planning. Climate change concerns our cultural and natural heritage, so it is crucial that we address this issue with regard to all of its social, physical and cultural consequences. Far-reaching actions are needed to adapt the natural and historic environment to make it more resilient to climate change and to limit further damage.

Encouraging more people to cycle is increasingly being seen as a vital part of any local authority plan to tackle congestion, improve air quality, promote physical activity and improve accessibility. This

design guide brings together and updates guidance previously available in a number of draft Local Transport Notes and other documents. Although the focus is the design of cycle infrastructure, parts of its advice are equally appropriate to improving conditions for pedestrians. Individual chapters cover: general design parameters; signing issues; network management; reducing vehicle speeds on cycle routes; bus and tram routes; cycle lanes; off-road cycle routes; junctions; cycle track crossings; cycle parking; public transport integration. A list of references and an appendix of related publications complete the book. It is hoped that, by bringing together relevant advice in a single document, this guide will make it easier for local authorities to decide what provision, if any, is required to encourage more people to cycle.

Reflections on Architecture, Society and Politics brings together a series of thirteen interview-articles by Graham Cairns in collaboration with some of the most prominent polemic thinkers and critical practitioners from the fields of architecture and the social sciences, including Noam Chomsky, Peggy Deamer, Robert A.M. Stern, Daniel Libeskind and Kenneth Frampton. Each chapter explores the relationship between architecture and socio-political issues through discussion of architectural theories and projects, citing specific issues and themes that have led to, and will shape, the various aspects of the current and future built environment. Ranging from Chomsky's examination of the US-Mexico border as the architecture of oppression to Robert A.M. Stern's defence of projects for the Disney corporation and George W. Bush, this book places politics at the center of issues within contemporary architecture.

This book provides a critical overview of the relationships between planning and railway management and development during the key period in the 20th Century when the railway was in public ownership: 1948-94. It assesses the strength of the relationships when working in collaboration with the private sector. The book then focuses on the interplay between planning and railway since privatization in 1994 and points to best practice for the future in institutional structures and policy development to secure improved outcomes.

Are Britain's cities attractive places in which to live, work and play? Asking that question, this is a critical review of how the design dimension of the Urban Renaissance strategy was developed and applied, based on expert academic assessments of progress in Britain's thirteen largest cities. The case studies are preceded by a dissection of New Labour's renaissance agenda, and concluded by a synthesis of achievements and failings. Exploring the implications of this strategy for the future of urban planning and design, this is a must-read for students, practitioners of these subjects and for all those who wish to improve the quality of the British urban environment.

Road passenger transport management is an important role, involving the planning and coordinating of passenger transport operations, including routes and schedules. Managers ensure that passengers reach their destinations safely, on time and in the most cost-effective way. Road Passenger Transport Management covers all the essential tasks a transport manager is expected to master. Road Passenger Transport Management provides tips and tools for working with customers, planning routes and scheduling delivery times, as well as managing a team of supervisors, administration staff and drivers. The authors include guidelines for coordinating staff training and arranging vehicle maintenance, MOTs and tax payments, as well as organizing vehicle replacements and managing contracts and developing new business. This is a contributed book, with expertise shared from well-known academics and practitioners who have spent many years in the passenger transport field. The tools and case studies in this vital new guide will enable readers to learn new skills or build on existing expertise. Online supporting resources include sample performance reports and target assessment forms.

Designing for Cycle Traffic compares and evaluates international principles and practices for designing for cycle traffic. It is essential reading for designers and planners in traffic and highway engineering, transport planning, and urban design.

Design Against Crime will aid the design profession to meet the challenges presented by the competing needs and complex systems around crime and security. It proposes that designers should use their creative talents to develop innovative solutions to security problems that contribute to the ongoing fight against crime. The authors first explain the design against crime approach to security and safety. They go on to provide practical advice on addressing crime and insecurity within the design process and offer practical examples of design being applied to security and safety. They also examine crime victimisation from a global perspective, highlighting the benefits worldwide of reducing opportunities for crime, including issues of national security, such as terrorism and natural disasters. A design-led, human-centred approach provides a way forward that is both aspirational and practical. The book is aimed primarily at design professionals, educators and students interested in safety and security, from all design disciplines, including product design, architecture, service design and communication design. The book should also be read by crime prevention experts, planners, local authorities, managers of urban environments and policymakers.
