Chapter 13: How Populations Evolve

13.7 Populations are the units of evolution. A population is a group of individuals of the same species living in the same place at the same time. Evolution is the change in heritable traits in a population over generations. Populations may be isolated from one another (with little interbreeding), or individuals within populations may interbreed.

Chapter 13 How Populations Evolve - Weebly
264 CHAPTER 13 |How Populations Evolve likely that all species descended from common ancestors that used this code. Because of these homologies, bacteria engineered with human genes can produce human proteins such as insulin and human growth hormone (see Module 12.7). But molecular homologies go beyond a shared genetic code.

13 - Pearson

The Evolution of Populations 13.7 Evolution occurs within populations 1. A population is a group of like individuals (same species) & living in the same place at the same time. 2. Populations may be isolated from one another (with little interbreeding). 3. Individuals within populations may interbreed. 4.
