~~Notes Hydrology And Floodplain Analysis Bedient~~

Bedient has worked on a variety of hydrologic problems, including river basin analyses, major floodplain studies, groundwater contamination models, and hydrologic/GIS models in water resources. He has been actively involved in developing computer systems for flood prediction and warning, and recently directed the development of a real-time flood alert system (FAS2) for the Texas Medical Center (TMC) in Houston.

Hydrology and Floodplain Analysis, 6th Edition offers a clear and up-to-date presentation of fundamental concepts and design methods required to understand hydrology and floodplain analysis. The text addresses the computational emphasis of modern hydrology and provides a balanced approach to important applications in watershed analysis, floodplain computation, flood control, urban hydrology, stormwater design, and computer modeling.
