I: Reality and Subjectivity explains the very essence of consciousness as it evolved from its primordial appearance as life on earth, on up through evolution as the human ego, and hence, the transcendence of the ego as the spiritual Reality of Enlightenment and the Presence of Divinity. The uncommon clarity and lucidity with which the highly evolved subject matter is presented facilitates the reader's understanding and comprehension. The nature of consciousness is described in terms that recontextualize and simplify the spiritual process. The nonlinear reality of the enlightened sage is thereby made comprehensible to the reasoning mind.

Concludes the presentation of a long-predicted major advance in critical human knowledge. Explains the very essence of consciousness as it evolved from its primordial appearance as life on earth, on up through evolution as the human ego, and hence, the transcendence of the ego as the spiritual Reality of Enlightenment and the Presence of Divinity. The uncommon clarity and lucidity with which the highly evolved subject matter is presented facilitates the reader's understanding and comprehension. The nature of consciousness is described in terms that recontextualize and simplify the spiritual process. The nonlinear reality of the enlightened sage is thereby made comprehensible to the reasoning mind.

This is the seventh book in a progressive series based on the revelations of consciousness research. It describes in detail how to discern not only truth from falsehood but also the illusion of appearance from the actual core of reality. The text explains how to differentiate perception from essence, and thereby enables the reader to resolve the ambiguities and classical riddles that have challenged mankind for centuries and baffled the best minds in history. While modern technologies have provided a phethora of new toys and conveniences, the basic problems of daily existence remain. This book provides the tools to survive and regain fundamental autonomy and inner harmony while living with the complexities of the modern world.

Discusses the forces that people can control versus the unseen, uncontrollable powers which actively govern many lives.

Learn to let go of the illusions of the ego and discover the real you with this collection of inspiring quotes on the ego, mind, and spiritual enlightenment from human-consciousness expert Dr. David R. Hawkins. Are you willing to let go of seeing yourself as the ego believes you to be? Are you willing to go further, to know that the ego itself is an illusion? In this book, select teachings from Dr. David R. Hawkins ' s extensive body of work will guide you in the process of realization, surrender, and transformation. When we let go of the old ways of thinking, our attachments, and the false promises of the ego, we discover the truth that we are one with All. Features classic passages, including: • It is not really necessary to subdue the ego, but merely to stop identifying with it. • Every life experience, no matter how " tragic, " contains a hidden lesson. When we discover and acknowledge the hidden gift that is there, a healing takes place. • Enlightenment is not a condition to be obtained; it is merely a certainty to be surrendered to, for the Self is already one ' s Reality. It is the Self that is attracting one to spiritual information. • To be enlightened merely means that consciousness has realized its most inner, innate quality as nonlinear subjectivity and its capacity for awareness. • The only energy that has more power than the strength of the collective ego is that of Spiritual Truth. " This book is small in size, but it can have a massive impact on your life. It will take you through the process of a total transformation of consciousness—if you choose to apply its teachings deeply within yourself. " — From the Introduction by Fran Grace, Ph.D.

Reveals a breakthrough in documenting a new era of human knowledge. Only in the last decade has a science of Truth emerged that, for the first time in human history, enables the discernment of truth from falsehood. Presented are discoveries of an enormous amount of crucial and significant information of great importance to mankind. Truth and Reality, Dr. Hawkins states, have no secrets, and everything that exists now or in the past- even a thought- is identifiable and calibratable from the omnipresent field of Consciousness itself.

What is a self? Does it exist in reality or is it a mere social construct—or is it perhaps a neurologically induced illusion? The legitimacy of the concept of the self has been questioned by both neuroscientists and philosophers in recent years. Countering this, in Subjectivity and Selfhood, Dan Zahavi argues that the notion of self is crucial for a proper understanding of consciousness. He investigates the interrelationships of experience, self-awareness, and selfhood, proposing that none of these three notions can be understood in isolation. Any investigation of the self, Zahavi argues, must take the first-person perspective seriously and focus on the experiential givenness of the self. Subjectivity and Selfhood explores a number of phenomenological analyses pertaining to the nature of consciousness, self, and self-experience in light of contemporary discussions in consciousness research. Philosophical phenomenology—as developed by Husserl, Heidegger, Sartre, Merleau-Ponty, and others—not only addresses crucial issues often absent from current debates over consciousness but also provides a conceptual framework for understanding subjectivity. Zahavi fills the need—given the recent upsurge in theoretical and empirical interest in subjectivity—for an account of the subjective or phenomenal dimension of consciousness that is accessible to researchers and students from a variety of disciplines. His aim is to use phenomenological analyses to clarify issues of central importance to philosophy of mind, cognitive science, developmental psychology, and psychiatry. By engaging in a dialogue with other philosophical and empirical positions, says Zahavi, phenomenology can demonstrate its vitality and contemporary relevance.

This is the second volume of a trilogy that began with Power vs. Force and will be completed in the year 2002 by the publication of the third volume entitled I: Reality and Subjectivity. The Eye of the I (which calibrates at 950) is more advanced than Power vs. Force (which calibrates at 850) and brilliantly reveals the very core of the spiritual process critical to the state of Enlightenment. The intrinsic power of the information provided in this startling classic is sufficient of itself to elevate the consciousness of the reader. This likelihood has been anticipated and provided for by preparatory recontextualizations. Included are verbatim dialogues with advanced students, instructions, and explanations that illuminate the spiritual teachings. The Eye of the I is a brilliant work that dissolves the barriers between the known and the unknown, between science and spirituality, and between the Newtonian linear paradigm of the ego and the nonlinear reality of Enlightenment. With the resolution of the self, the Self shines forth and reveals one's true identity.

The now widely known Map of calibrated levels of Consciousness was presented in Power vs. Force in 1995 and has been translated into all the world's major languages. This was followed by The Eye of the I (2001), I: Reality and Subjectivity (2003), and Truth vs. Falsehood (2005), which explored the levels of Truth reflected throughout society. Transcending the Levels of Consciousness returns to the exploration of the ego's expressions and inherent limitations and gives detailed explanations and instructions on how to transcend them. As with the reading of Dr. Hawkins' previous books, the reader's level of consciousness is advanced as a consequence of exposure to the information itself. This opens up avenues to the relief of suffering for oneself and others, which fulfills the purpose of the work and the intention to facilitate the reader's own Enlightenment.

Can we trust our senses to tell us the truth? Challenging leading scientific theories that claim that our senses report back objective reality, cognitive scientist Donald Hoffman argues that while we should take our perceptions seriously, we should not take them literally. How can it be possible that the world we see is not objective reality? And how can our senses be useful if they are not communicating the truth? Hoffman grapples with these questions and more over the course of this eye-opening work. Ever since Homo sapiens has walked the earth, natural selection has favored perception that hides the truth and guides us toward useful action, shaping our senses to keep us alive and reproducing. We observe a speeding car and do not walk in front of it; we see mold growing on bread and do not eat it. These impressions, though, are not objective reality. Just like a file icon on a desktop screen is a useful symbol rather than a genuine representation of what a computer file looks like, the objects we see every day are merely icons, allowing us to navigate the world safely and with ease. The real-world implications for this discovery are huge. From examining why fashion designers create clothes that give the illusion of a more " attractive " body shape to studying how companies use color to elicit specific emotions in consumers, and even dismantling the very notion that spacetime is objective reality, The Case Against Reality dares us to question everything we thought we knew about the world we see.
