The first edition of the ICE Conditions of Contract was launched in December 1945 and the subsequent editions have become one of the main form of standard contracts for UK civil engineering work. This new 7th edition has been drafted by Clients, Consultants, Contractors to provide a simple and standardised contract specifically tailored for civil engineering projects. It is been endorsed by the sponsoring bodies namely The Institution of Civil Engineers, The Association of Consulting Engineers and The Civil Engineering Contractors Association. The 7th edition is based on the traditional pattern of Engineer-designed, Contractor-built Works with valuation by measurement. It has, however, been revised and updated in line with the recommendations made by the Latham Review and fully supports and promotes the benefits of teamworking and current procurement initiatives propounded by the Egan report. If the procedures as set out in the Contract are followed, the parties to the Contract are provided with a co-operative form of contract that should prevent delays or give rise to additional costs at any stage of a Contract. Other major changes that have been incorporated into the new 7th edition relate to: The Landfill Tax Regulations 1996 The Finance Act 1996 The Housing Grants, Construction and Regeneration Act 1996 The ICE Form of Default Bond This new 7th edition replaces all its predecessors, and like them it will become one of the main forms of contract for UK civil engineering works.

These conference proceedings address the wide range of geotechnical issues associated with urban development, from the use of case histories and reviewing existing data to the techniques and procedures associated with new construction works.

Helps towards delivering construction projects on time by enabling better client-contractor communication. This publication will help towards delivering construction projects on time by enabling better client-contractor communication. The new contract allows the employer, usually with the assistance of the contractor, to set a clear target for the cost of the civil engineering works to be carried out, in order to avoid projects overrunning on cost and deadline. ICE's latest contract also encourages the contractor to be more closely involved in the project at an early stage, such as project design, and provides an incentive for the employer and contractor to share profit or loss if the costs differ from the original estimation. To utilise the Target Cost Version effectively, a more open style of control and management is required which will permit an early and joint approach to the identification and management of risks. This is intended to lead to better channels of communication at an early stage between client and contractor. The Target Cost version - the latest member of the ICE Conditions of Contract family - has been produced due to industry demand.

Most civil engineering projects carried out in the UK which are concerned with the construction or maintenance of highways employ the 5th edition of the ICE Conditions of Contract and the Manual of Contract Documents for Highway Works. In order to maximise returns in construction works (or often, nowadays, to minimise losses) it is necessary for engineers, contractors and clients to have a full understanding of these documents, particularly those elements which have a financial connotation. Claims on highway contracts has been specifically written to explore those parts of the 5th edition of the ICE Conditions of Contract and the Manual of Contract Documents for Highway Works which are particularly important in the commercial aspects of highway contracts and to examine how they apply in claims situations. There have been many books written on claims by lawyers which are full of legalese. Claims on highway contracts is the first, and only book which has been written by a practising engineer who works in this field and has experience of the claims minefield to provide advice in a practical and straightforward manner.

Presents an introduction to the key project stages from conception through to completion of construction and then beyond to handing over the resulting structures and services for use. This book covers: project promotion, strategy and design; latest forms of contracts for construction; and partnering, alliancing and programme management.

Developed from the ICE Conditions of contract 6th edition by the CCSJC, these new conditions are designed to meet a widely felt need in the construction industry for use over the whole range of design and construct situations.
