I²C (Inter-Integrated Circuit), pronounced I-squared-C, is a synchronous, multi-master, multi-slave, packet switched, single-ended, serial communication bus invented in 1982 by Philips Semiconductor (now NXP Semiconductors).It is widely used for attaching lower-speed peripheral ICs to processors and microcontrollers in short-distance, intra-board communication.

~~I²C—Wikipedia~~

I²C or I2C is an abbreviation of Inter-Integrated Circuit, a serial communication protocol made by Philips Semiconductor (now it is NXP Semiconductor). It is created with an intention of communication between chips reside on the same Printed Circuit Board (PCB). It is commonly usually used to interface slow speed ICs to a microprocessor or a microcontroller.

I²C is ordinarily pronounced “ I-two-C ” , though it is also sometimes written as IIC (and pronounced “ I-I-C ”) or I 2 C (pronounced “ I-squared-C ”). The acronym stands for Inter-Integrated-Circuit. It is a type of serial computer bus and communications protocol that was first introduced to the market by Philips Semiconductor in 1982.

~~What Is I2C (Inter-Integrated Circuit)? About I2C ...~~

The I 2 C bus was developed by Phillips Semiconductors, now NXP Semiconductors, in the early 1980s as a simple bidirectional, two-wire bus for efficient communications and control of integrated circuits on a common pc board.

Inter-Integrated Circuit, known as I2C, I2C, or even IIC, is a two-wire data transfer bus. Philips Semiconductor (now NXP Semiconductors) invented the protocol in 1982, and it received widespread use in applications where low costs and ease-of-implementation take priority over lightning-quick speed.

The Inter-Integrated Circuit™ (I2C™) module is a serial interface useful for communicating with other peripheral or microcontroller devices. These peripheral devices may be serial EEPROMs, display drivers, analog-to-digital converters, etc.

~~Section 24. Inter-Integrated Circuit (I2C)~~

The Inter-Integrated Circuit (I 2 C) Protocol is a protocol intended to allow multiple "peripheral" digital integrated circuits ("chips") to communicate with one or more "controller" chips. Like the Serial Peripheral Interface (SPI), it is only intended for short distance communications within a single device.

I2C is in common use on mobile devices, but has no way for slave devices to initiate communication, has pull-up resistors that limit clock rate and decrease power efficiency. In 2013, the MIPI Alliance initiated work on a common sensor standard that would keep the best features of I2C and SPI but add features that would improve sensor integration.
