Take your knowledge of the 2012 INTERNATIONAL BUILDING CODE to the next level with the second half of the successful two-volume 2012 INTERNATIONAL BUILDING CODE COMMENTARY set. Maintaining the same practical and reader-friendly approach, this book picks up where the first volume left off, targeting chapters 16 through 35 of the 2012 IBC. For each of these chapters, the full text of the code is presented alongside an in-depth commentary that explores the real-world applications of its requirements, effective strategies for following them, and the potential consequences that could result when they are overlooked. The end result is an indispensable resource for code officials, engineers, architects, inspectors, plans examiners, contractors, and anyone seeking a better understanding of the 2012 IBC. ASCE/SEI 49-21 provides the minimum requirements for conducting and interpreting wind tunnel tests to determine wind loads on buildings and other structures.

Offers the latest regulations on designing and installing commercial and residential buildings.

This comprehensive code for homebuilding combines building, plumbing, mechanical, fuel gas, energy, and electrical provisions into a single resource. The 2015 INTERNATIONAL RESIDENTIAL CODE FOR ONE- AND TWO- FAMILY DWELLINGS SOFT COVER uses these provisions to provide detailed insight into the construction of one- and two-family dwellings and townhouses up to three stories high. Using foundational principles that facilitate the use of new materials and building designs to guide the content, this reference guide also establishes minimum regulations using prescriptive provisions. This updated code includes information on common walls separating townhouses, remodeling of an existing basement, ramps that do not serve the required egress door, and carbon monoxide alarms.

This comprehensive code comprises all building, plumbing, mechanical, fuel gas and electrical requirements for one- and two-family dwellings and townhouses up to three stories. The IRC contains many important changes such as: An updated seismic map reflects the most conservative Seismic Design Category (SDC) based on any soil type and a new map reflects less conservative SDCs when Site Class A, B or D is applicable. The townhouse separation provisions now include options for using two separate fire-resistant-rated walls or a common wall. An emergency escape and rescue opening is no longer required in basement sleeping rooms where the dwelling has an automatic fire sprinkler system and the basement has a second means of egress or an emergency escape opening. The exemption for interconnection of smoke alarms in existing areas has been deleted. New girder/header tables have been revised to incorporate the use of #2 Southern Pine in lieu of #1 Southern Pine. New tables address alternative wood stud heights and the required number of full height studs in high wind areas.

"The book provides a 28-step process that is organized according to the three phases of architectural design: schematic design, design development, and construction documents"--
