Interpretative Phenomenological Analysis: Theory, Method ...

Interpretative phenomenological analysis is an approach to psychological qualitative research with an idiographic focus, which means that it aims to offer insights into how a given person, in a given context, makes sense of a given phenomenon. Usually these phenomena relate to experiences of some personal significance, such as a major life event, or the development of an important relationship. It has its theoretical origins in phenomenology and hermeneutics, and key ideas from Edmund Husserl, M

Interpretative Phenomenological Analysis: Theory, Method ...

On August 24, 2017. Interpretative Phenomenological Analysis (IPA) is an increasingly popular approach to qualitative inquiry and essentially an attempt to understand how participants experience and make meaning of their world. Although not to be confused with the now ubiquitous style of beer with the same initials (India Pale Ale), Interpretative Phenomenological Analysis is similarly accused of being too frequently and imperfectly brewed (Hefferon and Gil-Rodríguez 2011).

---

An introduction to Interpretative Phenomenological Analysis

Interpretative phenomenological analysis (IPA) is a qualitative approach concerned with the detailed exploration of individual lived experience. This entry starts off by exploring the method ' s theoretical underpinnings in phenomenology and hermeneutics. It then outlines, with detailed examples, the suggested steps for conducting an IPA study.

---

Foundations - SAGE Research Methods

Interpretative phenomenological analysis is a tradition (or approach) that interprets and amplifies the ' lived experience ' stories of research participants; however, for those stories to make-sense interpretively, the interpreter (researcher) of the stories must have a true and deeper understanding of the participants ' ' lived experiences ' .

Descriptive and interpretive approaches to qualitative research. Robert Elliott and Ladislav Timulak. Qualitative research methods today are a diverse set, encompassing approaches such as empirical phenomenology, grounded theory, ethnography, protocol analysis and dis- course analysis. By one common definition (Polkinghorne, 1983), all these methods rely on linguistic rather than numerical data, and employ meaning-based rather than statistical forms of data analysis.
