Information Technology in a Global Society is the first textbook written specifically for the new IB ITGS syllabus, covering IT systems, social impacts and ethical issues, and each area of application. The text provides engaging content that blends clear examples of technical concepts with consideration of social issues. Discussion points for extended independent learning and complete, modern examples are included to enhance teaching and understanding, and ensure students get the best possible experience from the ITGS course. A free sample chapter is available on the book's web site, www.itgstextbook.com. Textbook features include: Clear objectives for each chapter, tied directly to the ITGS syllabus, so you can be sure that all aspects of the course are being covered. Course content is explained through clear and up to date examples, plus historical context. Over 200 varied exercises, mixing ethical discussion points, classroom exercises, practical activities, and exam style questions to cover the syllabus content from a variety of assessment angles. Theory of Knowledge (TOK) links are included, enabling integration with the IB core hexagon. Common mistakes and misconceptions are highlighted so students can avoid them. Key language review for every chapter, plus a complete glossary of ITGS terminology. Over 300 diagrams, photographs, and illustrations to bring topics alive. Fully cited examples in every chapter mean students can extend their learning with wider reading-an essential part of IB courses. Free online support to extend learning with additional case studies, links, and activities (www.itgstextbook.com).

An ideal reference guide to introducing the IB Diploma in your school.

ABOUT THIS BOOK This book is intended for researchers who want to keep abreast of current developments in corpus-based natural language processing. It is not meant as an introduction to this field; for readers who need one, several entry-level texts are available, including those of (Church and Mercer, 1993; Charniak, 1993; Jelinek, 1997). This book captures the essence of a series of highly successful work shops held in the last few years. The response in 1993 to the initial Workshop on Very Large Corpora (Columbus, Ohio) was so enthusiastic that we were encouraged to make it an annual event. The following year, we staged the Second Workshop on Very Large Corpora in Kyoto. As a way of managing these annual workshops, we then decided to register a special interest group called SIGDAT with the Association for Computational Linguistics. The demand for international forums on corpus-based NLP has been expanding so rapidly that in 1995 SIGDAT was led to organize not only the Third Workshop on Very Large Corpora (Cambridge, Mass.) but also a complementary workshop entitled From Texts to Tags (Dublin). Obviously, the success of these workshops was in some measure a reflection of the growing popularity of corpus-based methods in the NLP community. But first and foremost, it was due to the fact that the work shops attracted so many high-quality papers.

This timely revision will feature the latest Internet issues and provide an updated comprehensive look at social and ethical issues in computing from a computer science perspective.

Everyone does research. Some just do it better than others. In this chaotic world of information and misinformation, referred to as “information fog,” university students, in particular, need to learn how to conduct research effectively. Good research is about a quest to discover more, about a burning desire to solve society's problems and make a better world. Ultimately, research is a way forward to a resolution of life's greatest difficulties. In this seventh

edition of *Research Strategies: Finding Your Way through the Information Fog*, author William Badke walks you step by step through the entire research process—from choosing a topic, to writing the final project, and everything in between. A seasoned researcher and educator, Badke offers tried-and-true tips, tricks, and strategies to help you identify a problem, acquire pertinent information, and use that information to address the problem. Employing a host of examples and humor, *Research Strategies: Finding Your Way through the Information Fog* shows how research can be exciting and fun.

This volume sets out to analyse the relation between social media and politics by investigating the power of the internet and more specifically social media, in the political and social discourse. The volume collects original research on the use of social media in political campaigns, electoral marketing, riots and social revolutions, presenting a range of case studies from across the world as well as theoretical and methodological contributions. Examples that explore the use of social media in electoral campaigns include, for instance, studies on the use of Face book in the 2012 US presidential campaign and in the 2011 Turkish general elections. The final section of the book debates the usage of Twitter and other Web 2.0 tools in mobilizing people for riots and revolutions, presenting and analysing recent events in Istanbul and Egypt, among others.
