The world has changed and so must the CMS. Your customers are increasingly using mobile apps, virtual reality, augmented reality, chat, voice-controlled digital assistants, smart wearables, and various Internet of Things devices. If you're not connecting with them through these new channels, you're missing an opportunity. You need a new type of CMS that was built for omnichannel content management and delivery from the very beginning--a headless CMS. Headless CMS focuses on content management and provides an Application Programming Interface (API) that makes the content available on any device and any platform. As part of your digital transformation, you need to be much more agile and test new ideas in a matter of days, not months. An on-premise CMS may slow you down as you find yourself waiting for IT to provision the infrastructure. The headless architecture enables vendors to provide a CMS in a true Software as a Service model, which wasn't possible before, which means you can get started immediately and quickly deploy your applications. Cloud-first headless CMS is the next generation in content management for brands that want to stay ahead of the curve by engaging customers in the growing number of channels. This book will help you make the right decisions and choose a solution that will help you stand out.
