Home > Key exchange. The use of key exchange boxes forms part of the integrated safety system solution in machinery and switchgear applications. In complex operations a number of isolations and/or multiple access points may need to occur to ensure that protected areas are safe to work on. The exchange boxes enable both multiple isolations as well as multiple access through the transfer of keys.

To enable Customer Key for both Exchange Online and SharePoint Online, you will create two pairs of key vaults. Use a naming convention for key vaults that reflects the intended use of the data encryption policy with which you will associate the vaults. See the Best Practices section below for naming convention recommendations.
