beam machining (LBM) is a non-

conventional Machining
manufacturing process,
a form of machining, in
which a laser is directed
towards the work piece
for machining. This

Get Free Laser Machining Of

Advanced process uses thermal energy to remove material from metallic or nonmetallic surfaces. The high frequency of monochromatic light will fall on the surface then heating, melting and vaporizing of the material take place due to impinge of photons.

~~Laser beam machining~~

Wikipedia

Get Free Laser Machining Of

Laser machining of metals and composites
Extensive studies have been carried out on LAM of various metals, including Inconel 718, Ti6Al4V, Waspaloy, hardened steel, compacted graphite iron, high chromium steels and metal matrix composites. Unlike ceramics, these materials are

Get Free Laser Machining Of

machinable by
conventional single
point cutting tools.

~~Laser assisted
machining | Industrial
Laser Solutions~~

Laser-assisted
machining (LAM) has
shown its potential to
significantly reduce
fabrication costs and
improve product quality
for advanced materials.

Get Free Laser Machining Of

While extensive studies have been conducted on laser-assisted turning of various ceramics and high temperature alloys, few attempts have been made to extend LAM to milling operations.
