“ The Madhouse Effect: How Climate Change Denial Is Threatening Our Planet, Destroying Our Politics, and Driving Us Crazy ” takes a satiric look at the attempts of climate-deniers and corporate interests to bury protest and further pollute the planet. Together, they expose the fallacies being argued.

The Madhouse Effect | MICHAEL E. MANN

The Madhouse Effect portrays the intellectual pretzels into which denialists must twist logic to explain away the clear evidence that human activity has changed Earth's climate. Toles's cartoons collapse counter-scientific strategies into their biased components, helping readers see how to best strike at these fallacies.

The Madhouse Effect: How Climate Change Denial Is ...

Publisher Description. Author of The Madhouse Effect is the award-winning climate scientist Michael E. Mann, who has been on the front lines of the fight against climate denialism for most of his career. He has witnessed the manipulation of the media by business and political interests and the unconscionable play to partisanship on issues that affect the well-being of billions.

The award-winning climate scientist Michael E. Mann and the Pulitzer Prize – winning political cartoonist Tom Toles have been on the front lines of the fight against climate denialism for most of their careers. They have witnessed the manipulation of the media by business and political interests and the unconscionable play to partisanship on issues that affect the well-being of billions. The lessons they have learned have been invaluable, inspiring this brilliant, colorful escape hatch from the madhouse of the climate wars. The Madhouse Effect portrays the intellectual pretzels into which denialists must twist logic to explain away the clear evidence

that human activity has changed Earth's climate. Toles's cartoons collapse counter-scientific strategies into their biased components, helping readers see how to best strike at these fallacies. Mann's expert skills at science communication aim to restore sanity to a debate that continues to rage against widely acknowledged scientific consensus. The synergy of these two climate science crusaders enlivens the gloom and doom of so many climate-themed books—and may even convert die-hard doubters to the side of sound science.

A member of the Inter-governmental Panel on Climate Change examines the fossil-fuel industry's public relations campaign to discredit the science of climate change and deny the reality of global warming.

A renowned climate scientist shows how fossil fuel companies have waged a thirty-year campaign to deflect blame and responsibility and delay action on climate change, and offers a battle plan for how we can save the planet. Recycle. Fly less. Eat less meat. These are some of the ways that we've been told can slow climate change. But the inordinate emphasis on individual behavior is the result of a marketing campaign that has succeeded in placing the responsibility for fixing climate change squarely on the shoulders of individuals. Fossil fuel companies have followed the example of other industries deflecting blame (think "guns don't kill people, people kill people") or greenwashing (think of the beverage industry's "Crying Indian" commercials of the 1970s). Meanwhile, they've blocked efforts to regulate or price carbon emissions, run PR campaigns aimed at discrediting viable alternatives, and have abdicated their responsibility in fixing the problem they've created. The result has been disastrous for our planet. In *The New Climate War*, Mann argues that all is not lost. He draws the battle lines between the people and the polluters-fossil fuel companies, right-wing plutocrats, and petrostates. And he outlines a plan for forcing our governments

and corporations to wake up and make real change, including: a common-sense, attainable approach to carbon pricing- and a revision of the well-intentioned but flawed currently proposed version of the Green New Deal; allowing renewable energy to compete fairly against fossil fuels debunking the false narratives and arguments that have worked their way into the climate debate and driven a wedge between even those who support climate change solutions combatting climate doomism and despair-mongering With immensely powerful vested interests aligned in defense of the fossil fuel status quo, the societal tipping point won't happen without the active participation of citizens everywhere aiding in the collective push forward. This book will reach, inform, and enable citizens everywhere to join this battle for our planet.

How power is wielded in environmental policy making at the state level, and how to redress the ingrained favoritism toward coal and electric utilities. The United States has pledged to the world community a reduction in greenhouse gas emissions by 26 – 28 percent below 2005 levels in 2025. Because much of this reduction must come from electric utilities, especially coal-fired power plants, coal states will make or break the U.S. commitment to emissions reduction. In *Climate of Capitulation*, Vivian Thomson offers an insider's account of how power is wielded in environmental policy making at the state level. Thomson, a former member of Virginia's State Air Pollution Control Board, identifies a “ climate of capitulation ” in state government—a deeply rooted favoritism toward coal and electric utilities in states' air pollution policies. Thomson narrates three cases involving coal and air pollution from her time on the Air Board. She illuminates the overt and covert power struggles surrounding air pollution limits for a coal-fired power plant just across the Potomac from Washington, for a controversial new coal-fired electrical generation plant in coal country, and for coal dust pollution from truck traffic in a country hollow. Thomson links Virginia's climate of capitulation with

Download Ebook Madhouse Effect Threatening Destroying Politics

campaign donations that make legislators politically indebted to coal and electric utility interests, a traditionalistic political culture tending to inertia, and a part-time legislature that depended on outside groups for information and bill drafting. Extending her analysis to fifteen other coal-dependent states, Thomson offers policy reforms aimed at mitigating the ingrained biases toward coal and electric utilities in states' air pollution policy making.

For fans of *The Drowned World* and *World War Z*, this “sobering and scary (and fascinating) novel—a look at where we’re going if we don’t quickly get our act together” (Bill McKibben, *New York Times* bestselling author) regarding climate change—unveils our potential terrifying future. *2084: Global warming has proven worse than even the most dire predictions scientists had made at the turn of the century. No country—and no one—has remained unscathed. Through interviews with scientists, political leaders, and citizens around the globe, this riveting fictional oral history describes in graphic detail the irreversible effects the Great Warming has had on humankind and the planet. In short chapters about topics like sea level rise, drought, migration, war, and more, The 2084 Report brings global warming to life, revealing a new reality in which Rotterdam doesn’t exist, Phoenix has no electricity, and Canada is part of the United States. From wars over limited resources to the en masse migrations of entire countries and the rising suicide rate, the characters describe other issues they are confronting in the world they share with the next two generations. “If the existential threat of climate change keeps you up at night, James Lawrence Powell’s *The 2084 Report* will make you want to do everything in your power to elect leaders who will combat global warming and save our planet” (Marie Claire).*

"Jamie Margolin is among the powerful and inspiring youth activists leading a movement to demand urgent action on the climate crisis. With determined purpose and moral clarity, Jamie is pushing

Download Ebook Madhouse Effect Threatening Destroying Politics

political leaders to develop ambitious plans to confront this existential threat to humanity. Youth To Power is an essential how-to for anyone of any age who feels called to act to protect our planet for future generations." --- Former Vice President Al Gore Climate change activist and Zero Hour founder Jamie Margolin offers the essential guide to changemaking for young people. The 1963 Children's March. The 2016 Dakota Access Pipeline protests. March for Our Lives, and School Strike for Climate. What do all these social justice movements have in common? They were led by passionate, informed, engaged young people. Jamie Margolin has been organizing and protesting since she was fourteen years old. Now the co-leader of a global climate action movement, she knows better than most how powerful a young person can be. You don't have to be able to vote or hold positions of power to change the world. In Youth to Power, Jamie presents the essential guide to changemaking, with advice on writing and pitching op-eds, organizing successful events and peaceful protests, time management as a student activist, utilizing social and traditional media to spread a message, and sustaining long-term action. She features interviews with prominent young activists including Tokata Iron Eyes of the #NoDAPL movement and Nupol Kiazolu of the #BlackLivesMatter movement, who give guidance on handling backlash, keeping your mental health a priority, and how to avoid getting taken advantage of. Jamie walks readers through every step of what effective, healthy, intersectional activism looks like. Young people have a lot to say, and Youth to Power will give you the tools to raise your voice.

Climate change has become one of the most polarizing issues of our time. Extremists on the left regularly issue hyperbolic jeremiads about the impending destruction of the environment, while extremists on the right counter with crass, tortured denials. But out in the vast middle are ordinary people dealing with stronger storms and more intense droughts than they ' ve ever known. This middle

Download Ebook Madhouse Effect Threatening Destroying Politics

ground is the focus of *Betting the Farm on a Drought*, a lively, thought-provoking book that lays out the whole story of climate change—the science, the math, and most importantly, the human stories of people fighting both the climate and their own deeply held beliefs to find creative solutions to a host of environmental challenges. Seamus McGraw takes us on a trip along America's culturally fractured back roads and listens to farmers and ranchers and fishermen, many of them people who are not ideologically, politically, or in some cases even religiously inclined to believe in man-made global climate change. He shows us how they are already being affected and the risks they are already taking on a personal level to deal with extreme weather and its very real consequences for their livelihoods. McGraw also speaks to scientists and policymakers who are trying to harness that most renewable of American resources, a sense of hope and self-reliance that remains strong in the face of daunting challenges. By bringing these voices together, *Betting the Farm on a Drought* ultimately becomes a model for how we all might have a pragmatic, reasoned conversation about our changing climate.

First Published in 2011. Routledge is an imprint of Taylor & Francis, an informa company.

Periodic reports from the Intergovernmental Panel on Climate Change (IPCC) evaluate the risk of climate change brought on by humans. But the sheer volume of scientific data remains inscrutable to the general public, particularly to those who may still question the validity of climate change. In just over 200 pages, this practical text presents and expands upon the essential findings of the IPCC's 5th Assessment Report in a visually stunning and undeniably powerful way to the lay reader. Scientific findings that provide validity to the implications of climate change are presented in clear-cut graphic elements, striking images, and understandable analogies.

Download Ebook Madhouse Effect Threatening Destroying Politics

Sometimes solving climate change seems impossibly complex, and it is hard to know what changes we all can and should make to help. This book offers hope. Drawing on the latest research, Mark Jaccard shows us how to recognize the absolutely essential actions (decarbonizing electricity and transport) and policies (regulations that phase out coal plants and gasoline vehicles, carbon tariffs). Rather than feeling paralyzed and pursuing ineffective efforts, we can all make a few key changes in our lifestyles to reduce emissions, to contribute to the urgently needed affordable energy transition in developed and developing countries. More importantly, Jaccard shows how to distinguish climate-sincere from insincere politicians and increase the chance of electing and sustaining these leaders in power. In combining the personal and the political, *The Citizen's Guide to Climate Success* offers a clear and simple strategic path to solving the greatest problem of our times.
