If all mammals are lost there is a high chance that another mass extinction would take place in about 500 years after evolution 22. Many biologists propose that we are currently in a sixth major extinction. If this is true, this mass extinction event may be the first caused by one of the Earth's inhabitants—humans.

Mass Extinctions. The number of species on the planet, or in any geographical area, is the result of an equilibrium of two evolutionary processes that are ongoing: speciation and extinction. Both are natural "birth" and "death" processes of macroevolution. When speciation rates begin to outstrip extinction rates, the number of species will increase; likewise, the number of species will decrease when extinction rates begin to overtake speciation rates.
